How to Trade Bitcoin Futures on BTCC

Original:

<https://www.btcc.com/en-US/academy/crypto-basics/guide-how-to-trade-bitcoin-futures-on-btcc>

Futures contracts are types of derivatives product where their values are derived from an underlying asset. The underlying assets can be a stock, bonds, or commodities. In the case of cryptocurrency futures contracts, the underlying asset would be crypto asset (Bitcoin BTC).

Unlike buying Bitcoin directly from the spot market, a bitcoin futures contract is generally traded on leverage. This means you can buffer up your purchasing power and potential profit by borrowing money up to 150X from the exchange like [BTCC](#).

BTCC offers daily, weekly futures and perpetual contracts for Bitcoin derivative trading. The weekly Bitcoin futures contracts can be held up to a maximum of one week starting from Sunday 09:00 - Sunday 05:00 (UTC+8). However, the Bitcoin perpetual contracts has no expiry period, and you can maintain your position as long as you meet the margin requirements.

What are Bitcoin Futures?

With Bitcoin futures, the contract will be based on Bitcoin's price, and speculators can "bet" on what they expect Bitcoin's future price will be. In addition, it allows investors to speculate on Bitcoin's price without really owning Bitcoin.

It has two important repercussions. First, while Bitcoin itself is unregulated, Bitcoin futures can be traded on exchanges that are governed. Those concerned about the risks associated with the industry's lack of regulation will welcome this development.

Second, in regions where Bitcoin trading is prohibited, Bitcoin futures allow investors to speculate on Bitcoin's price.
