[Non-fungible tokens](#) (NFTs) and the ecosystem that supports them are driving the [cryptocurrency](#) market to new heights of adoption and development. [Axie Infinity](#) may not have been as well-known as Crypto Punks or Bored Ape Yacht Club (BAYC), but it was instrumental in expanding the NFT landscape and the blockchain gaming industry as a whole. Battle Infinity, an NFT and [metaverse](#) project, aspires to maintain this trend.

Investors have shown early support for the initiative, with the [IBAT token](#) presale already underway. In this article, we will discuss the five main reasons why we think Battle Infinity will become more popular than Axie Infinity.

---

### The NFT and the Metaverse Cross Paths with Battle Infinity

Battle Infinity is a place to play fantasy sports games. Battle Infinity is based on the Binance Smart Chain (BSC) and combines NFTs and the metaverse. There is a robust play-to-earn (P2E) system available, and players can participate while keeping all of their virtual possessions. The IBAT Battle Arena is a metaverse where users can watch and perform for one another, interact with characters, and discover the virtual world.

With Battle Infinity, users are able to interact in a virtual setting, expanding the potential of the ecosystem as a whole.

### Continuation of the Next Polygon

There is some validity to the claim that Battle Infinity will become the next Polygon. Before its rebranding in March 2021, the Polygon network went by the name Matic Network. Polygon is a sidechain on the Ethereum network that collects and verifies transactions off-chain before inserting them into the main chain. This improves the network's speed and scalability. Polygon is not the only scaling option for Ethereum's blockchain, but its sophistication has helped it garner a lot of

attention.

The argument hinges on the researchers and designers behind the modular network. Polygon was started by Indians, and one of their leaders is Sandeep Nailwal. Having a common ancestor suggests that Battle Infinity has a solid technical foundation and is poised for extraordinary success.

## **Powered by the BSC Network, Version 4**

This may seem like a minor point, but those with more experience in the crypto space will recognize the immense potential in constructing on the Binance Smart Chain network. The BSC network is more scalable than the Ethereum network and can handle more transactions per second. In BSC, validators do not have to engage in a competitive bidding process in order to verify network transactions because the network operates on a proof of staked authority (PoSA).

BSC is cheaper than Ethereum in terms of transaction fees. Ethereum's gas prices have discouraged both developers and users from using the platform, which prevents them from taking part in the decentralized economy. In comparison, the fees charged by the BSC are extremely minimal. Costs must be covered by using Binance Coin (BNB).

Currently, 43 decentralized finance (DeFi) initiatives are utilizing Binance's infrastructure. Binance is rapidly expanding into new areas and paving the way for a more crypto-native future, thanks to its position as the largest cryptocurrency exchange by trading volume.

## **Both Fantasy Sports and the Metaverse are Developing**

Since the global pandemic damaged the world economy, the fantasy sports business has grown significantly. The rise in the number of individuals staying inside for extended periods of time led to a rise in the popularity of fantasy sports as a way to stave off the boredom that comes with being cooped up for so long.

A market analysis shows that by 2027, the value of the global fantasy sports industry could have increased by a significant amount from its present \$20.14 billion. Other media projections put Fantasy Sports' market size at \$34.66 billion in 2020, with a CAGR of 11.47 percent throughout that time (CAGR).

The fantasy sports sector in India has also expanded exponentially. Medium-term growth in India's Fantasy Sports gaming scene was 38% CAGR in the last five years, according to a report by the Federation of Indian Fantasy Sports (FIFS) and Deloitte.

Nothing has been forgotten about the environment of the metaverse. Companies in the technology sector, such as Microsoft and Meta, are establishing connections to the metaverse. The sustained attention shown so far bodes well for its future. The market capitalization of the metaverse ecosystem has surpassed \$38 billion, according to a report by Grand View Research. If people keep paying attention to this developing market, it will increase at a CAGR of 39.4 percent between now and 2030.

Because it serves both markets, Battle Infinity is in a prime position to capitalize on both mature and emerging trends.

## **Access to 100x Profits**

The potential earnings investors can make during the presale stage of Battle Infinity are the last major reason why it may be the next blockbuster blockchain gaming platform. A private sale was made for the cryptocurrency token AXS by Axie Infinity, with investors paying \$0.08 per token. This is a lot more than the early adopter price of the Battle Infinity token, IBAT.

Battle Infinity can be purchased for as little as \$0.0015, giving investors a chance at 100x gains once the token is listed on an exchange. If the market goes bullish and reaches \$1, investors might receive a return on investment (ROI) of 8,000%. A hundred dollar investment may generate \$800,000 in revenue over the next few months.

Aiming to take advantage of this game-changing chance? Preorders for Battle Infinity are currently being accepted and will be open for the next three months. The lowest possible investment is only 0.1BNB, and the maximum is 16,500 BNB. Investors can purchase IBAT tokens by visiting the presale page and linking their Metamask wallet.
