Degrain (DGRN) Could 10,000-Fold Next Year, Surpassing Sandbox and Decentraland

Original:

<https://www.btcc.com/en-US/academy/research-analysis/degrain-dgrn-could-10000-fold-next-year-surpassing-sandbox-and-decentraland>

Inexperienced [cryptocurrency](#) investors look for businesses with large growth potential. However, professional traders use a long-term strategy to trading, such as investing, and seek out cryptocurrency businesses that will yield a return.

What would you say is the best way for a trader to put their money to work right now? Many investors see the current stage of cryptocurrency presales as an excellent time to buy. Top analysts predict that the [Degrain](#) (DGRN) presale token will be the next big thing in the cryptocurrency market.

Sandbox (SAND)

The Sandbox stands out because it lets players alter their adventures to their liking by acquiring and trading [NFTs](#). GameMaker users can make their own NFT assets with the help of the platform's capabilities like VoxEdit. If a market accepts The Sandbox's NFTs, a user is free to sell their creation there.

Everyone can use their imagination to create their own unique SAND experience. With the help of its own and OpenSea's marketplaces, Sandbox (SAND) gives its users a superior digital sphere of influence.

Sandbox (SAND) is a fantastic opportunity for bitcoin novices and experts alike to explore their creative potential on a safe platform.

Decentraland (MANA)

Virtual reality (VR) platform Decentraland (MANA) is powered by the [Ethereum](#) blockchain. Users can make their own useful and perhaps profitable content and applications.

In the Decentraland (MANA) metaverse, the official digital currency is an ERC20 token called MANA, which can be used to buy goods, services, and virtual land parcels.

Tokens that adhere to the ERC20 standard, like the Decentraland (MANA) token, can be traded for

one another. Linking the framework for intelligent contracts with real-time visualization and games are the components of Decentraland (MANA), including consensus, land content, and real-time layers.

Degrain (DGRN)

Degrain is a new [NFT](#) marketplace that operates over many blockchains and is open to all users. The project's goal is to completely disrupt the NFT industry, and it is developing the infrastructure to make that possible.

We predict that by next year's end, Degrain will have surpassed competitors like Sandbox and Decentraland by working with real-world companies for hyperspeed growth and providing users with a really unique experience.

Users who participate in the presale will receive a badge indicating they are among the first holders, have their trading costs waived permanently, and be eligible to earn passive revenue by staking their tokens.

Starting its presale on July 7th, Degrain has already sold over 30% of its phase one allotment in less than a week. During the first 60 seconds of its presale, almost 11 million tokens were purchased.

There is a full safety net for investors because the smart contract has been audited and liquidity will be locked away for 10 years while team tokens will be locked for 365 days.

Experts in the cryptocurrency industry anticipate that this token will have the greatest growth and provide the biggest returns to investors in 2022. It is anticipated that DGRN would increase by another 6,000% before the presale ends on September 30. In July, Degrain was the best performing investment, earning us this month's Best Investment Award. Discover below how to participate in the pre-sale.
