5 Top Play-to-Earn Games in 2022

Original:

<https://www.btcc.com/en-US/academy/research-analysis/5-top-play-to-earn-games-in-2022>

Utilizing [blockchain](#) technology, [play-to-earn](#) games provide players the option to win crypto rewards for their talent and effort.

This article provides a list and analysis of the top 5 play-to-earn games expected to release in 2022. The main elements of the game, the devices it can run on, the incentives you can expect, and how to get started right away are all covered here.

The Top Play-to-Earn Games, Reviewed

Like other “play-to-earn” games, “P2E” titles are decentralized, blockchain-powered MMORPGs where players can earn in-game “coins” that can be cashed out for cash.

We’ve compiled a list of the top [crypto](#), [metaverse](#), and [NFT](#) games available to help you save time:

1. Tamadoge: The Brand-New Presale Play-to-Earn Game

One of the best places to invest is during a presale or initial coin offering (ICO), and the one we recommend most is a new crypto gaming project that is accepting funds until the fourth quarter of 2022.

To capitalize on the widespread interest in meme coins while providing players with extra value, the developers of Tamadoge have planned an NFT pets game in the vein of CryptoKitties, NeoPets Meta,

and Catecoin, with a Doge theme.

The game's name is a pun on "Tamagotchi," as players are tasked with taking care of and developing their "Doges" from infancy into adulthood. Follow the official Telegram channel for updates on this project and read more about it at the link below (beware of imposters in crypto Telegram groups, admins will never DM you first or ask for your seed phrase).

As with our next suggested P2E game, Battle Infinity, the first stage of the Tamadoge presale has already raised about \$800,000 and is on pace to sell out early.

2. Battle Infinity, the New Metaverse's Finest Play-to-Earn Game

With their new free-to-play game [Battle Infinity](#), the designers hope to create a platform that brings players the best of both the gaming world and the virtual one. The [IBAT](#) Premier League is a Metaverse-integrated fantasy sports platform, one of six available to players.

Using the platform's native token, [IBAT](#), players can purchase access to games and leagues via the NFT pass system. Battle Swap, a marketplace for exchanging NFT passes and converting awards into other assets, is where you may buy the coin. Battle Market gives value to goods and characters that would otherwise be worthless in the traditional gaming industry, while Battle Staking encourages players to compete for the biggest possible prizes.

With Battle Arena, each player may create a customized avatar, which they can then spruce up with new cosmetics from the Battle Market. The Battle Market is also a great place to purchase new headwear or accessories. When using the Battle Games platform, users have access to a wide variety of NFT games that they may use to gain rewards. Winnings in NFTs can be cashed out for fiat currency or other game items.

Regular staking participants can benefit from the global staking pool by sharing in the fees generated by the use of the IBAT token. Players can use IBAT to buy advertising space on the

platform's billboards, and IBAT ownership makes the ecosystem more resilient overall.

Battle Infinity has a Telegram group where players may get the newest information as it becomes available (remember admins will never DM you first). Battle Infinity, which has already sold out its presale early but will be listed on crypto exchanges like PancakeSwap, is a great option for investors searching for ventures with growth potential.

3. Silks - Fun And Unique Play-to-Earn Game

You can also win a lot of money playing silks in 2022. When it comes to [blockchain](#) technology, Silks is more than just a game; it's a complete metaverse. This earn-to-play game connects the physical world with the virtual metaverse.

Silks, in essence, has built its own digital universe in which horse racing can be experienced in realistic detail. Unique digital horses are produced through the platform by combining training and racing records, breed and lineage information, and other data.

You can buy a piece of a real thoroughbred racehorse's future success by purchasing a non-fungible token (NFT) that represents a stake in that horse. Silks' native crypto token, \$STT, will be rewarded

to you, the owner, every time your horse wins a real-world race. You can compete with your horse at any of several tracks.

We also mentioned that the horses' underlying NFTs will be transferable, enabling a secondary market to develop. Tokens worth \$STT can be spent on a variety of goods and services inside the Silks ecosystem. Gains can also be made through staking Bitcoin and rearing and selling horses.

The Silks road map concludes with plans to provide avatars for sale to the general public in the second quarter of 2022. Next, in the third quarter, land and stables will be put up for sale, and then the first public auction of Silks horses will take place. Metaverse registration and on-ramping will allow Silks players to earn racing and breeding rewards in the fourth quarter of 2022.

4. Lucky Block -2022's Popular Play-to-Earn Game

In 2022, Lucky Block will be the top play-to-earn (P2E) cryptocurrency game. Lucky Block, operated on the Binance Smart Chain (BSC), is a cutting-edge cryptocurrency gambling site where users can win a daily prize. These prizes are distributed quickly since they are paid out in LBLOCK, Lucky Block's native coin.

Starting earlier this year, LBLOCK has been trading on decentralized exchanges, with a 12% token sales tax going straight into Lucky Block's prize pool. Thus, the total amount up for grabs now exceeds \$2.2 million, with prize drawings set to begin around the middle of May 2022. Every winner will be selected at random through the use of the Chainlink VRF service, guaranteeing that Lucky Block is in full compliance with all applicable laws and regulations.

A \$5 LBLOCK investment will get you one entry into each day's prize draw at Lucky Block. By purchasing BNB with a credit or debit card, users can quickly and easily acquire LBLOCK through the Lucky Block website and exchange it for LBLOCK in a matter of minutes. It's worth noting that LBLOCK owners who link their cryptocurrency wallet to the Lucky Block platform will also be eligible to get a free entry into each daily prize draw.

5. The Sandbox: The Best Play-to-Earn NFT Game for Artists

To earn cryptocurrency on the blockchain, the Sandbox is one of the best places for imaginative people to spend their time. As an open-world game powered by Ethereum, The Sandbox was designed with that in mind. Since then, the game has shifted to Polygon's layer 2 to cut down on its energy consumption and associated costs, as well as to boost its overall performance.

The most obvious point of comparison between this and Roblox or Minecraft is that it is a GameFi crypto token initiative. In the hub, players can create their own games, build their own environments, and plan their own adventures. And then you turn around and sell it all for a tidy sum. As an example, you might develop your own in-game mini-game and charge users to engage with it.

A player's most valuable asset in the Sandbox is their land. Each LAND token represents a stake in digital real estate. Self-created, one-of-a-kind environments are also available to players. Now you may earn money by renting out your land to others.

In this P2E game, you can also make and sell your own customized items. Consequently, if you want to make some extra money, you can sell your artwork on the market in exchange for SAND tokens if you enjoy doing visual art. Value, authority, mortgages, and more can all be transferred with SAND tokens in the metaverse.

SAND tokens can be earned through participation in platform-based tournaments and games. You can access the Sandbox on your computer, iPad, or Mac, or with a mobile app. eToro offers an easy and transparent way to purchase Sandbox tokens.
