## What is ARPA?

As investors have seen, ARPA has been on fire in recent days.

ARPA is the token that will power the soon-to-be-launched ARPA Network protocol, a layer 2 scaling solution with a focus on privacy. As a decentralized computation network, ARPA Chain is designed to enhance the fairness, security and privacy of existing blockchains.

According to the project's roadmap, its blockchain is currently in the testnet phase, and the ARPA mainnet is set to launch before the end of this quarter.

This suggests that the latest surge in ARPA price could be due to the speculation before the mainnet release.

Excitement has been building towards the cryptocurrency in recent days and weeks due to the success of the project's TestNet, the second version of which is currently interacting smoothly with the Ethereum-Sepolia testnet at a rate of around 200,000 times per day.

The mainnet will also launch on [Ethereum](#) and other chains/layer 2s such as Binance Smart Chain (or BNB Chain), [Arbitrum](#) and Optimism in early June.

Technically speaking, few platforms provide futuristic solutions to computational and security

problems the way Arpa has been designed to do. Its two effective layers include:

- **Protocol layer**- As the foundational basis of the network, it enables nodes to join on their own and creates the structure for the exchange of ARPA tokens for computational functions and services. To limit all forms of malware, the protocol layer records all node activity constantly. The protocol layer also ensures the efficient assimilation of multi-party nodes on the layer.
- **Computation layer**- As an extension of the protocol layer's recording of all node activity, the computational layer rewards legitimate activity with ARPA tokens. It penalizes malicious nodes by taking away their stakes in the ARPA coin. This is achieved via a cryptographic verification method.

## What Makes ARPA Chain a Secure Network?

Three central proofing systems render all processes taking place on Arpa as secure, fair, and efficient. These include:

**1. Proof of Correctness**, in which all nodes are analyzed for efficiency and the computation is delegated to a select few. This greatly improves the efficiency, code execution method and security, and the transaction throughput. This streamlines all nodes into contributing to consensus.

**2. Proof of Secureness** verifies the computations that take place off the chain using Trusted Execution Environments (TEE). To delegate more power to the primary network and ensure that data is accurate and efficient, TEEs play an essential role.

**3. Proof of Computation** is used to manage and maintain the number of nodes completed on the network, to make sure remuneration and rewards are paid proportionate to participation. This proof records the participation data of the nodes, even during multi-party computations, to reward the nodes accordingly.

## ARPA Price Analysis

The recent surge helped ARPA reach the top 10 trending coins on CoinMarketCap, a big achievement for the coin which only has a market cap of \$130 million.

ARPA/USD was last changing hands across major cryptocurrency exchanges at around \$0.11 per token, its highest level since February 2022, up around 100% this week and now up in the region of 320% for the year.

At the time of writing, ARPA is trading at \$0.1058 with a market capitalization of \$131,518,587, ranking #178 amongst all cryptocurrencies by that metric. In the past 24 hours, the price of ARPA has decreased by 2.05% with a trading volume of \$341,415,386.

Technical analysis of ARPA crypto reveals that the price has broken above the key resistance level of \$0.10. This key psychological level has been acting as a resistance on the higher timeframe. A reclaim of this level will make ARPA price prediction very bullish for the coming weeks.

In this case, if ARPA can next break to the north of resistance in the \$0.12 area, this should open up the door to a run higher towards the bottom channel of an old upwards trend channel, which, alongside the prior record highs from late-2021, should come into play in the mid-\$0.20s.

As hype surrounding the ARPA Network's mainnet launch grows, bulls could be in store for easy 2x gains.

## ARPA Price Prediction 2025

ARPA seems positioned to reach its full potential in the coming years. If it manages to attract investors and whalestats with its developmental and community-building initiatives, ARPA token might experience a significant increase in 2025.

Our ARPA price prediction 2025 forecasts that at the very highest, ARPA price may reach \$0.202 by 2025. The minimum price could be \$0.173, with an average price of \$0.185.

## ARPA Price Prediction 2030

The ARPA ecosystem is actively growing with new users and partnerships and will remain viable in the long term. Our ARPA price prediction 2030 forecasts that ARPA is expected to trade between

\$0.46 and \$0.49 in 2030.

In closing, please know the forecast figures are generated using our price prediction tool and in that matter, not a guarantee, that the actual price action will follow what we mentioned. Forecasts are not immune to changing circumstances and will be updated with new developments. Always do your own research and evaluate all necessary factors before making any investment.

## FAQs

---

### Can ARPA reach 1 dollar?

To reach \$1, ARPA will have to rise 9.5x. At \$1, ARPA's market cap would be nearly \$1.2 billion. If ARPA were to rise 25% every year, it would take it about 9 years to reach \$1. Given ARPA's performance so far, it is possible for ARPA to reach \$1.

### Where can I buy ARPA?

Notable options for purchasing ARPA include Binance, BTCC and KuCoin. Among these, [BTCC](#) is one of the best exchanges as it witnesses a large trading volume of ARPA. Compared to Binance, BTCC has no regulatory concerns and is available in U.S., Canada and many other countries in Europe. Furthermore, [BTCC exchange](#) is highly recommended due to its favourable attributes such as extremely low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.

In order to trade [ARPA/USDT](#) on [BTCC](#), you need to first [register](#) an account. And you need to have some USDT in your crypto wallet, or you can directly [buy](#) it on BTCC. Once you have USDT, you can trade [ARPAUSDT Perpetual Contracts](#) on BTCC with a leverage up to 50x. The transaction is safe, cheap, and fast with VERY easy steps. You can also choose to deposit [ARPA](#) with a minimum single deposit of 4220ARPA.

### What are BTCC's specs?

Sometimes, users feel more comfortable working with an exchange if they know that the exchange has a footprint in the industry. With 12 years of stable and secure operating history, [BTCC](#) is one of the [top cryptocurrency derivatives exchanges](#) in CoinMarketCap, which boasts a wide selection of

60+ cryptocurrencies and millions of registered users, offering services in 100+ countries.

[BTCC](#) charges 0.06% for both takers and makers, which are way below the industry average. According to the largest and most recent empirical study on crypto exchange trading fees, the average spot trading taker fee is 0.2294% and the maker fee is 0.1854%.

With high liquidity, low trading fees and fast transaction speed, BTCC allows users to open a trade immediately even when the crypto markets experience a sharp rise or plunge.

Apart from crypto trading, BTCC also supports tokenized futures service, allowing users to trade [stocks](#) and commodities futures ([Gold/Silver](#)) with USDT as the margin. The maximum leverage is up to 150x.

Trading on BTCC begins with [registration](#) and log in, which only takes 30 seconds. New customers can now sign up [here](#) to get a welcome bonus of 10 USDT, and complete the KYC verification to access all BTCC's features and [BTCC bonus](#). Once verified, you can start [trading ARPA](#) now.
