As the Ripple-Fuelled Rally Slows, SOL Price Falls by About 14%

Key Takeaways:

- As investors started taking profits, the [SOL](#) price surge slowed.
- Despite this, investors were still wary about where [Solana](#)'s price would go.

The native [cryptocurrency](#) of the [Solana](#) blockchain platform, SOL, saw its rise fade out on July 16 after briefly trading above \$27. The [SOL](#) price collapsed under selling pressure as bulls abandoned the rise that had been spurred by the SOL-SEC verdict.

On July 18, the price of a single Solana token fell by more than 8%, hitting a daily low somewhere around \$25. If the current trend continues, the price of [SOL](#) could drop to the \$24 support level.

In addition, if the nearby support for SOL fails, the price may fall to the convergence of the 50-day EMA (purple wave) and the 100-day EMA (blue wave) near \$20.7.

However, a challenge to the resistance above \$32.7 could occur for the Solana token price if the SOL price recovers and breaks above the immediate resistance.

After being overbought for nearly a week, SOL's RSI has returned to its normal zone and is currently sitting at 68.62 on the daily chart.

The SOL Price Is Currently Within a Forming Bullish Triangle

In the meantime, the Solana token has established a bullish 'Ascending Triangle' technical pattern.

The ascending triangle pattern is formed by a horizontal trendline joining swing highs and a rising trendline joining swing lows. A strong breakout can be gauged by the volume of the breakout.

If market conditions are favourable, buyers will enter when the gap between the trendlines narrows. As a result, high trading volumes would cause the price of token to break over the nearby horizontal resistance. A retracement is expected if the uptrend fails to sustain itself after a low-volume breakout.

If a triangle is broken, the price goal is the same as the triangle's height at its thickest point, according to technical analysis. If the triangle pattern holds, SOL's price might rise to around \$82, which is a 220% increase from present levels.

However, SOL's uptrend was recently rejected by the triangle's horizontal trendline, suggesting that the coin will return to the ascending trendline support before making a recovery.

Investors Worried About Solana's Future

Yet investors' confidence in the token's future remained low. According to "Horse," a cryptocurrency trader, betting against Solana is a bad idea.

With the price having broken out of a multi-month trading range, a retest of that range's high represents the strongest risk-reward scenario in quite some time. It appears like the perpetrator is driving the fade away. As long as our strength is greater than 25, I think we're good to proceed.

In a tweet, cryptocurrency trader Horse claimed.

An further user, however, argued that disgraced FTX founder Sam Bankman-Fried's involvement in Solana was a major factor in the stock's rise to \$260.

Alameda Research had previously unloaded a large quantity of SOL tokens to protect its interests, leaving Solana to bear the brunt of FTX's collapse. Additionally, the blockchain platform's community has been considering a hard fork as a kind of protection against the SEC case.

Crypto writer Colin Wu observed on Twitter on June 10 that support for a hard fork was growing. In the present speculative market environment, a lack of faith in SOL's price action could be detrimental to the token's chances.
