What is Avalanche?

Avalanche is a decentralized smart contract platform with the aim of being incredibly fast, affordable, and eco-friendly. AVAX, a native utility token of the ecosystem, serves as the main medium of exchange. Its maximum supply is capped at 720 million, with 360 million minted and sold via private and public sales at launch, and the remaining 360 for staking rewards distributed over the decades.

In contrast to legacy blockchain networks with a single blockchain and validator set, Avalanche features a heterogeneous network of various blockchains and validator sets. It utilizes proof of stake, assisted by the distinctive Avalanche consensus, which is an alternative to the standard Nakamoto consensus used by proof-of-work platforms.

Avalanche consists of three built-in interoperable blockchains:

- Exchange Chain (X-Chain) for transactions
- Contract Chain (C-Chain) for smart contracts
- Platform Chain (P-Chain) for administering the subnets, coordination of all the validators, and the staking mechanism.

C-Chain and P-Chain make use of the Snowman consensus protocol, whereas X-Chain utilizes the Avalanche consensus protocol. These blockchains are validated and secured by all Avalanche validators, which is also called the Primary Network.
