What is Bitcoin SV?

Created in late 2018, Bitcoin SV is a fork of Bitcoin Cash, which again is a fork of Bitcoin. Bitcoin SV, with its native coin BSV, is an independent blockchain, albeit with similarities with the current Bitcoin.

Bitcoin SV (SV is short for “Satoshi Vision”) was inceptioned to restore the original Satoshi protocol and the initial modus operandi of the Bitcoin ecosystem, keep it stable, and scale massively. This is the primary reason that some purists are biased toward it and expect the price of Bitcoin SV to scale higher.

Much to the excitement of the Bitcoin purists, [BSV](#) has stretched the block size to 4GB, facilitating over 50K transactions each second. The huge block size allows transactions to reach finality quicker and reduces costs and fees. This lower fee reduces the number of transactions on the mempool, improving the BSV network’s throughput.

Other traits which make Bitcoin SV popular are detailed in the below graphic:

						
		BTC	ETH	BCH	Hyper Ledger	BSV
	Unowned	✓	✓	✓	✗	✓
	Proof-of-Work	✓	✗	✓	✗	✓
	UTxO	✓	✗	✓	✗	✓
	Stable	✗	✗	✗	✗	✓
	Compliant	✗	✗	✗	✓	✓
	Extensible	✗	✓	✗	✓	✓
	Forth	✓	✗	✓	✗	✓
	Scalable	✗	✗	✗	✗	✓

Bitcoin SV aims to rival the offerings of Visa in a way the more popular Bitcoin could not. It also has the scope to include smart contracts freely, something Bitcoin hasn't adopted openly.

Like Bitcoin, Bitcoin SV has a capped supply of 21 million. In terms of utility, the BSV token is used to pay for block rewards and transaction fees. And even Bitcoin SV follows a halving schedule similar to Bitcoin. As such, the tokenomics model is disinflationary and deflationary after the circulating supply equals the fixed supply.

Overall, the fundamentals look strong, especially from an enterprise perspective. Bitcoin SV beats BTC in terms of transaction costs and speed due to its larger block size. BSV can literally scale as per requirements, making it the more robust version of the original Bitcoin vision.

Bitcoin SV Price Analysis

Bitcoin SV has experienced a surge in price, with a remarkable 37.5% increase in the past seven days. This significant boost has led to speculation about the involvement of large investors, commonly known as whales, in the market.

At the time of writing, Bitcoin SV is trading at \$49.11 with a market capitalization of \$950,703,197, making it the 44th largest crypto by that metric. In the past 24 hours, the price of BSV has increased by 0.73% with a trading volume of \$117,849,966.

As Bitcoin SV attracts attention with its substantial trading volume and notable price increase, the involvement of whales raises questions about their investment strategies and the potential impact on the cryptocurrency's future performance.

Bitcoin SV has demonstrated a strong bullish pattern on the technical front, following a breakthrough above the key resistance level at \$44.50.

This level had previously acted as a significant barrier, represented by the formation of a triple-top pattern.

However, the breach above \$44.50 has invalidated this bearish pattern, indicating a potential shift in momentum.

The closing of the candles above the \$44.50 level suggests the possibility of further upward movement, with the next resistance level to watch at \$56.15.

Continuing the bullish trend, accompanied by a breakout above \$56.15, could propel BSV towards \$62.25 or potentially even higher, targeting \$67.75.

On the higher side, the subsequent resistance level will likely be around \$68.50.

Meanwhile, the support levels remain intact at \$44.50 and \$36.25, acting as crucial barriers to any potential downside moves.

This technical analysis indicates a positive outlook for Bitcoin SV, with the potential for further upward price movement.
