Can Solana Reach \$1,000? Solana Price Prediction 2023, 2025, 2030

Original:

<https://www.btcc.com/en-US/academy/research-analysis/can-solana-reach-1000-solana-price-prediction>

Can Solana Reach \$1,000? Quick Take

A price level of \$1,000 would translate to a \$404 billion market cap for Solana, which is certainly not impossible. Ethereum's peak market cap was around \$548 billion, so it seems possible for Solana to reach a \$404 billion market cap. Still, getting to a price of \$1,000 would require Solana to rise 43x, which won't be easy at all.

Solana's crash from its all-time highs has been truly massive. Even though SOL has gained an impressive 135% since January 1, 2023, Solana is still down just over 90% compared to its all-time high price of \$260.

Such a dramatic drop in valuation might be interpreted by some as a sign that Solana might be on its way out. After all, most other major cryptos such as Bitcoin and Ethereum have had a softer fall from their ATH.

However, there's plenty of reasons to believe that Solana is far from dead. No one knows the future

high-quality web3 game experiences, including custody solutions, marketplaces, inventory management, NFT minting, and credit card on-ramps and off-ramps. GameShift is expected to be available later this year.

- Neon EVM, an Ethereum Virtual Machine on Solana, has officially launched its mainnet. This means that developers can now build Ethereum dApps on Solana, taking advantage of Solana's high throughput and low fees. Neon EVM is a collaboration between Neon Labs and Solana Foundation, and it is supported by The Block.

Solana Price

Now let's first take a look at the Solana price history. While past performance should never be taken as an indicator of future results, knowing the recent SOL price history can give us some much-needed context when it comes to assessing whether Solana has the potential to recover and whether it can reach \$1,000.

The SOL price had been steadily rising before the crypto winter began, and it reached an all-time high of \$260 on 6 November 2021. After hitting the ATH, however, the price fell, first slowly and then quickly with continuous volatility.

It is generally known that 2022 was a year which saw disaster strike both Solana and the crypto sector as a whole. SOL opened 2022 at \$178.89 and then it fell below \$50 on 11 May as crypto markets suffered from the impact of Terra Luna crash.

Then in November, the collapse of the FTX (FTT) exchange caused yet another crypto crash, with

SOL closing the year at \$9.96, down more than 90% over the course of the year.

This year 2023 opened with a wind of recovery for the crypto market. And Solana recovered to above \$20 on 14 January, the first time since last November, though the prices remained volatile thereafter.

At the time of writing, SOL is trading at \$23.43, up 1.10% in the past 24 hours with a trading volume of \$374,486,160. Solana currently has a market capitalization of \$9,472,848,071, ranking #9 amongst all cryptocurrencies by that metric. The current price means that Solana has soared by 37.9% in a month.

Can Solana Reach \$1,000? Detailed Analysis

Investors who are particularly bullish on Solana often discuss ambitious price targets for SOL. One of the potential targets we see mentioned often is \$1,000. This is not too surprising, as investors are often focused on round numbers, such as \$10, \$100, \$500 or \$1,000—these are often called “psychological price levels”.

To reach \$1,000, Solana would need to increase in price by 43x from its current price, not an entirely unrealistic target for an asset that has a market cap of \$9.5 billion. At \$1,000, Solana’s market cap would be worth \$404 billion. Though this is a very large valuation, it’s certainly not impossible.

At its all-time high in November 2021, when SOL was trading at \$260 with a market cap of \$78 billion, Solana would only need to rise 3.8x to hit a price of \$1,000. Achieving a 3.8x multiple from a

\$78 billion market cap asset seems quite feasible.

For more context on why it's likely for Solana to reach a price target of \$1,000, let's take the example of Bitcoin and Ethereum.

At the absolute peak, Bitcoin's market capitalization was \$1.27 trillion, and at the time of writing it is \$568 billion. Ethereum's peak market capitalization was around \$548 billion. So, as an established top 10 coin, it's definitely not out of the realm of possibility for Solana to reach a \$404 billion market cap.

In other words, from these comparisons above, we can see that the possibility of SOL reaching 1000 is not out of the question.

Still, getting to a price of \$1,000 would require Solana to increase in price by about 43x, which won't be easy at all. There are practical challenges and there has to be significant progress in Solana use cases to justify this level.

Now let's move on to our Solana crypto price prediction for 2023 and beyond.

Solana Price Prediction 2023, 2025,2030

Below pulls together our Solana price prediction for 2023, 2025 and 2030, ensuring you have a rough idea of the coin's future value potential:

YEAR	MINIMUM PRICE	MAXIMUM PRICE
2023	\$10.00	\$100.00
2025	\$15.00	\$150.00
2030	\$100.00	\$1000.00

Solana Price Prediction 2023

The transaction speeds and success rate of the Solana network is still at par with a number of its rivals. According to Sol Scan, the success rate of Solana's transactions has fairly remained above 75% in the majority of the cases. This comes in light of the congestion in Solana's network.

If Solana price prediction manages to sail across the challenges of the crypto-verse, whilst fixing the consensus issues, SOL could gain strong upward momentum.

As per our Solana price prediction 2023, Solana price is expected to reach a possible high of \$32.66 by the end of 2023. We forecast a minimum price of \$28.24 and an average price of \$29.18.

Solana Price Prediction 2025

By the end of 2025, Solana might attract a myriad of projects to be built on its network, as well as enticing the creation of NFTs. In such a scenario, the thriving user base and a spike in the rate of adoptions & collaborations might spur a significant increase in SOL price.

Based on our Solana price prediction 2025, Solana should be worth at least \$51.02 in 2025, and the maximum price could be \$68.85. The estimated average price could be \$56.17.

Solana Price Prediction 2030

Solana looks well-positioned to reach its full potential in the coming years. If Solana manages to attract investors and whalestats with its developmental and community-building initiatives, Solana (SOL) might experience a significant increase in 2030.

Our Solana price prediction 2030 forecasts that at the very highest, Solana price may go up to \$160.00 by 2030. The minimum price could be \$142.39, averaging out at \$145.94. If the market gets bullish, Solana may rise much higher than our price forecast in 2030.

However, please know the figures are generated using our price prediction tool and in that matter, not a guarantee, that the actual price action will follow what we mentioned. Forecasts are not immune to changing circumstances and will be updated with new developments. Always do your own research and evaluate all necessary factors before making any investment.

Why Did Solana Collapse So Badly?

While practically all cryptocurrencies saw their prices crash in 2022's crypto winter, Solana was hit harder than most.

One of the biggest reasons for this is the sudden collapse of the FTX cryptocurrency exchange, which happened in November 2022. The FTX exchange and its affiliated trading firm Alameda Research were among the most notable backers of the Solana project and its ecosystem. For example, FTX and Alameda Research had purchased more than 50.5 million SOL tokens from the Solana Foundation, with the investment being valued at around \$1,183 million as of July 2023.

So, when FTX and Alameda Research were suddenly forced to file for bankruptcy and the full extent of their fraud started becoming more apparent, investor confidence in Solana also took a big hit as well. Between November 5, 2022 and December 29, 2022, the price of SOL dropped from a local peak of \$38.50 all the way down to \$9.40—a 75.5% crash in the span of less than two months.

This of course happened in the context of a broader cryptocurrency bear market, which provided additional selling pressure to the SOL markets. However, SOL has bounced back well from its December 2022 lows, and is changing hands at \$23.43 at the time of writing.

Can Solana Reach \$1,000: Conclusion

Overall, to reach \$1,000, Solana's market cap would be \$404 billion, which is feasible in the crypto market. Therefore, some believe that it is not impossible for Solana to reach \$1,000 in the future under the right conditions. Of course, anything can happen in the crypto market, so this is by no means a guarantee.

After the collapse of FTX and Alameda Research, many commentators in the crypto community quickly started proclaiming that Solana was dead. However, it is very unlikely that Solana will go to zero.

Solana has good chances to recover, although it's too early to speculate about new all-time highs at this point. *Changelly*, the popular AI-based price prediction website, has a quite bullish outlook for Solana's future. In its Solana price prediction, Solana will climb back above \$200 by the end of 2028.

The Solana ecosystem continues seeing new and exciting projects, and the platform's low fees and fast transactions are hard to beat for anyone looking to launch a decentralized applications that needs to handle large volumes of traffic. If Solana development activity continues to flourish, Solana could be a good investment in 2023.

Additionally, SOL is trading 90% below its all-time high, so there's certainly an opportunity for those who looking to buy the dip.

One popular and reliable exchange for you to buy SOL is [BTCC](#), you can check the links below to [create an account on BTCC](#) and start trading now. [BTCC exchange](#) is highly recommended due to its favourable attributes such as extremely low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.
