## What is Galxe (GAL)?

On September 6, 2022, Project Galaxy (GAL) has rebranded to Galxe ([GAL](#)), which highlights its mission & goal to fuel exploration for all in Web3.

“We are no longer a “project” but rather a fully-fledged ecosystem within Web3. We at Galxe are

passionate about constantly innovating and pushing the boundaries of what's technologically possible." according to CMO at Galxe.

Galxe is a blockchain development platform that helps Web3 projects and developers build better products and communities using curated credential data. Put basically, credential data are just records that make up our digital identity. Data curators collect this data and are rewarded for its utilization.

Galxe identified that credential data is segregated across closed and permissioned databases owned by different parties like governmental, financial and credit institutions. This results in the data being unattainable to the individuals and companies that could make the best use of it. An example of credential data on the blockchain is a borrowing record from a money market or your on-chain voting history. However, off-chain credential data is often stored out of the reach of users and developers on private servers. Galxe aims to build an open and collaborative credential data network accessible to all Web3 developers.

Another important aspect of the platform is the Galaxy ID, which is "aiming to become your Web3 LinkedIn." The Galaxy ID includes a user's individual user name, representing them across multiple chains and wallets, and displays their credentials collected in Web3. Developers can integrate the Galaxy ID toolkit and offer customized features based on the credentials provided, thereby tapping into a plethora of possibilities for different Web3 applications. Users can already integrate their Galaxy ID with Twitter, Discord and Github.

Finally, the Galaxy on-chain achievement token (Galaxy OAT) is a solution for event organizers and community managers to utilize the project's NFT infrastructure and on-chain credential data network to build and distribute NFT badge campaigns easily and reward their community members. Galxe bills the OAT as "a digital record of all your life's achievements." The OAT aims for integration between one's offline and online identities and could allow, for example, to combine offline events like concerts with online events through the issuance of NFTs.

GAL is the native token that powers Galxe. GAL holders have the ability to control the amount of the platform fee collected by the protocol and control funds held by the Galxe community treasury.

Developers using the data curated by Galxe have to pay a platform fee in GAL, which is mostly distributed among data curators. Curators utilize GAL to signal a data set's value.

## Galxe (GAL) Price Prediction 2025

Will playing P2E games cost me anything? We expect GAL will have a low of \$3.42 in 2025, an average of \$5.17, and a high of \$7.39 due to our strong growth prediction.

These numbers show that crypto-assets, led by Galxe, have the potential to flourish in the mainstream financial industry.

The increasing use of cryptocurrency as a payment option by businesses and financial institutions is largely responsible for this boom.
