Pikamoon is the latest metaverse and play-to-earn crypto token to drop as a presale. It has been trending among Pokemon Go enthusiasts – but is it a good buy in the current market conditions? This guide will assess how to buy Pikamoon, a presale project that was introduced in mid-March 2023 – and has managed to raise more than \$700,000 from early buyers of \$PIKA token.

Before talking about how to buy Pikamoon, let's have a look at the basic introduction of this currency if you want a good return on your profitable investment from it.

Pikamoon Token - Key Points

1. Pikamoon takes direct inspiration from Pokemon and introduces people to Pikaverse – a metaverse for users to explore.
2. The token – \$PIKA – powers a P2E project featuring turn-based gameplay and standard GameFi mechanics.
3. The Pikamoon presale was launched in the middle of March 2023, and it has managed to raise more than \$700,000 so far.
4. There are three phases of the Pikamoon presale – and the hard cap for the presale is \$6 million.

How to Buy Pikamoon - A Step-by-Step Guide

There are 50 billion Pikamoon tokens in total, out of which 30% have been dedicated to the presale. This project has taken a very different approach to the presale - which means early movers won't be able to withdraw their tokens quickly after the Token Generation Event.

The official whitepaper said that this move had been taken in order to ensure that there is no immediate dumping as Pikamoon is a long-term project. However, the 1 to 2-month cliff can possibly make people lose out on their gains since the market currently is extremely volatile.

Here are the steps to buy Pikamoon via the ongoing presale.

1. Go to the official website, Pikamoon.io, and click 'Buy Now'.
2. Connect your crypto wallet after ensuring that it has USDT/ETH.
3. Enter the number of PIKA tokens you want to buy.
4. Confirm your order to buy PIKA tokens, and claim them once the Pikamoon presale concludes.

Pikamoon Presale Details

Those who invest in Pikamoon during its early stage can make 3x gains by the time the listing date arrives. But that would depend on whether or not the project launches successfully since no timeline has been given as to when the presale will end.

Here are the key details about the Pikamoon presale.

| Presale Phase | Distribution | Tokens | Token price |
|---------------|--------------|---------------|-------------|
| Round 1 | 10% | 5,000,000,000 | \$0.0002 |
| Round 2 | 10% | 5,000,000,000 | \$0.0004 |
| Round 3 | 10% | 5,000,000,000 | \$0.0006 |

Those who invest in round 1 will have a 2-month cliff, and for round 2, Pikamoon has set a 1-month cliff. The third-round investors, however, won't face any cliff period whatsoever.

The remaining tokens have been distributed among the liquidity pool, reward system, team, marketing, and development of Pikamoon's ecosystem.

What is the Pikamoon Play-To-Earn Game?

- Pikamoon aims to create a real-time 3D metaverse with photorealistic visuals where players can collect characters (Pikamoons) and battle across the Pikaverse.
- This project claims that it aims to bring more life into the metaverse and make it a legit place for gamers.
- The project has created a detailed roadmap - but there is no timeline linked to it.

Pikamoon is a metaverse project that, according to the official whitepaper, will allow players to interact across a photo-realistic world where they will get to capture monsters and put them in a battle against each other.

The gameplay of Pikamoon takes direct inspiration from Pokemon. The official whitepaper states that the main inspiration came from Pokemon Red and Pokemon Sapphire. Their simplistic style could make the game accessible for new as well as old players. The turn-based attribute is not uncommon in P2E games. Axie Infinity is another one to do that. But Pikamoon aims to increase the graphical fidelity of such games.

Graphically, the game seems to take cues from Fortnite. It focuses on a cartoonishly-animated character design while still having a photorealistic style can be good for the ecosystem. This approach may play well into the Flame, Water, and Thunder Kingdoms that the Pikaverse is comprised of.

The entire Pikamoon ecosystem is powered by the \$PIKA tokens. \$PIKA tokens allow users to buy upgrades in the form of NFTs from the marketplace. Each time a transaction is made on the marketplace, Pikamoon burns 5% of the tokens to increase the scarcity.

Why to Invest in Pikamoon Coin?

Pikamoon is a good asset to invest in due to the following reasons.

It is a Presale Token

The first reason to invest in this token is that it is available as a presale. And if you are familiar with the concept, you know that presale allows users to become early movers to generate gains even before the token gets listed on cryptocurrency exchanges.

Metaverse Token

The interest in metaverse tokens post-2021 has slowed down due to the arrival of crypto winter. But now that the cryptocurrency market is slowly finding stable ground, innovative metaverse projects are emerging. Pikamoon, from at least what we can see from its roadmap, is aiming to become an innovative project.

Nostalgia Factor

Pikamoon is playing on the nostalgic factor by implementing concepts like turn-based gameplay and quirky creatures. That gives people something familiar to work with, potentially allowing the project to receive massive adoption.

Should You Buy Pikamoon - The Verdict

Pikamoon is a metaverse project that is playing on users' nostalgia for Pokemon and giving it a different paint job. The platform has good GameFi fundamentals, and participating in the presale is easy.

However, Pikamoon does impose cliffs on those who get in early, which can be damaging since the market is not currently stable. So, for many, waiting for a DEX or CEX listing confirmation first would be a good idea before investing in this crypto.

At the same time, there are alternative cryptocurrency presales that offer great advantages thanks to their simple and accessible concepts. Always do your own research before making any investment.
