# Phoenix Global (PHB) Price Forecast: PHB to reach new highs

Original:

<https://www.btcc.com/en-US/academy/research-analysis/phoenix-globalphb-price-forecast-phb-to-reach-new-highs>

Competition is fierce in the [blockchain](#)-as-a-service (BaaS) market, as several networks aim to provide businesses with a digital footprint.

In 2017, Phoenix Global was one of the earliest to enter the market. Unfortunately, there has been a prolonged downward trend in its PHB [cryptocurrency](#).

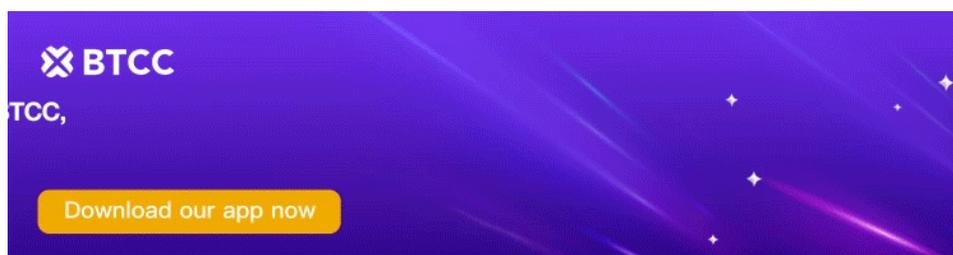

It was newly listed on [Binance](#), but as of this writing had increased in value by 330% over the previous seven days.

## Phoenix Global(PHB), Explained

As a business solution provider, Phoenix Global is delivering cryptocurrency and blockchain services. Developed with the customer in mind, it boasts a wide range of potential applications in markets as diverse as retail, tourism, the financial sector, and the automobile industry.

According to Phoenix Global's homepage, there are many reasons why you should use the company. The network can interact with data that is not stored in the blockchain thanks to the system's integrated oracle.

In addition to being able to use pre-existing blockchain applications, users can build their own on the blockchain network. The modularity of its smart contract architecture allows for an expansion of these capabilities at any level.

## The Fluctuating Value of Phoenix Global

On October 28, 2017, the PHX ticker symbol debuted as Phoenix Global's cryptocurrency, at a price of \$0.06. It started the year at \$0.23 and surged to a peak of \$0.80 on January 8 of that year.

During the subsequent three years, PHX's downward trend persisted, culminating in a record low price of \$0.0011 on March 13, 2020.

PHX's supply was re-denominated in November 2021 in an effort to reverse the currency's downward trend. Additionally, this was sparked by the switch from the NEO blockchain to the BNB Chain.

Using the new PHB coin, Phoenix Global cut the supply by a factor of 100. It was possible for token holders to convert their tokens to PHB at a rate of 100 PHX per PHB.

PHB's price had a brief uptick, hovering around the \$0.80 mark, before continuing its downward trend.

In 2022, as the crypto market collapsed, the value of PHB fell even lower. According to CoinMarketCap, its value hit a record low of \$0.066 on May 12 of that year, 2022.

Recent developments on the Binance exchange, including cross margin and isolated margin support for PHB with the BUSD pairing, have led to a sharp increase in the price of PHB, which hit a record high of \$2.55 on September 13.

As of the 15th of September, when this article was written, PHB was trading at \$1.50, an increase of

330% in just seven days.

## **Phoenix Global(PHB) Price Forecast**

As of this writing, experts' predictions regarding whether or not PHB can sustain its recent breakout have been mixed.

One of the most pessimistic was Gov Capital, which predicted the asset might be worthless in the long run. An October 2022 drop to zero dollars was predicted for the PHB cryptocurrency, according to market forecasts.

A "poor" long-term investment, according to WalletInvestor, which predicted a global price of \$1.11 for Phoenix in 2022. The PHB coin price projection for 2025 indicated that it might sink much lower, to \$1.05 by the year's end.

The website DigitalCoinPrice, meanwhile, predicted a more modest average price of \$1.77 for all of 2018. According to the phoenix global price forecast for 2030, the value of bitcoin may have increased to \$18.99 in that year.

According to CryptoPredictions, the value of cryptocurrencies will continue to climb. As of the end of 2025, its global average price was predicted to have risen to \$2.24, according to a phoenix global price forecast.

It's vital to keep in mind the great volatility of the cryptocurrency markets while thinking about PHB price predictions, as this makes it tough to forecast even the short-term value of a coin or token. As a result, analysts and algorithm-based forecasters can and do make errors in their predictions.

It goes without saying that anyone thinking about putting money into cryptocurrency tokens should first undertake their own due diligence. Before making any investment decision, it's a good idea to take a look at current market trends, news, technical and fundamental analysis, and expert opinion. Remember that there is no correlation between past success and future results. Not only should you never trade with money you can't afford to lose, but the opposite is also true.
