What is Render Token?

The Render Network is an organisation that utilises blockchain technology to help people create computer and videogame graphics. Founded in 2016 by Jules Urbach, it is a de facto subsidiary of graphics company OTOY. The system uses the Ethereum (ETH) blockchain as a base from which to allow people who want to render graphics to team up with people who have graphics processing units (GPUs).

Through the Render ecosystem, GPU technology is becoming faster, adaptable, and equipped to produce realistic visual effects.

As the network's website says: "The future is being built today and hardware limitations should not be what keeps you from being a part of the new digital renaissance. Render puts the power of GPU rendering at your fingertips, at a fraction of the cost and speed of in-house rendering."

The platform also uses smart contracts, computer programs which execute automatically when certain conditions are met, to prevent people from doing shoddy and fraudulent work. To protect both customer bases from cyber criminals, all criminals, all investments availed on the system are watermarked until a deposit is effectively distributed.

Render Token (RNDR), which first came onto the open market in 2020, is the native cryptocurrency that powers the platform. This token is designed to reward people who link their GPUs with the system.

Overall, the team has been focused on generating and releasing distinctive renders, copyright laws, and personalized streaming authorizations. If things prove fruitful for the RNDR markets, its price could increase significantly throughout 2023.

Render Token Price

Render token price shoot up to an all-time high of \$8.76 on 21 November 2021. After that, though, a series of market crashes last year saw RNDR sink to a low of \$0.2984 on 19 June 2022. Things got better in 2023, as a bouyant market saw the token surge to \$2.58 on 30 April.

At the time of writing, Render Token is trading at \$2.41 with a market capitalization of \$878,056,647, ranking #54 amongst all cryptocurrencies by that metric. In the past 24 hours, the price of RNDR has increased by 3.13% with a trading volume of \$279,796,468.

The Render token price has surged by 41.4% in the past seven days, with the cryptocurrency benefitting from the news that Apple will reveal its long-awaited VR headset on June 5.

Because the Render blockchain is used to provide a decentralized GPU network that will have applications in virtual reality and the metaverse, the market expectation is that the launch of Apple's VR headset will ultimately increase adoption for Render.

And with Render recently launching a version of its app for iPads, there's a very real chance that developers for Apple's new headset could end up using the Render network, boosting RNDR's price considerably.

RNDR's chart provides a fairly clear indication that the token is in full breakout mode, with its indicators all suggesting that it may be the near the peak of its current rally.

The momentum is very high, with RNDR's 30-day moving average (yellow) racing strongly above its 200-day average (blue), indicating that its rally may still have plenty of time left to run.

What's encouraging in this respect is that the altcoin has stuck to new support levels today, signalling that it will consolidate around a higher price.

And as we noted above, its rally is largely due to anticipation surrounding Apple's reveal of its VR headset, which is expected on June 5.

The reason why RNDR in particular is responding to this news is that Render's parent company launched OctaneX in December, an app for M1 and M2 iPads that can provide real-time, photo-realistic 3D rendering.

It's therefore entirely plausible that developers who build apps for Apple's VR headset will make use of OctaneX, and given that the latter is powered by Render, it implies more demand for RNDR.

So once more investors realize that Render has a real link to the forthcoming Apple VR headset, it's very likely that RNDR will see further rises.

Of course, this could be a long-term process, especially when VR has been around for several years already without having a massive impact on mainstream culture.

But with Apple now entering the VR market, an arms race is likely to begin between the big tech giants, one which will have the effect of increasing virtual reality adoption in general.

For this reason, RNDR arguably has the kind of long-term prospects that most altcoins can only dream of, and should be expected to witness sustained appreciation in the coming months and years.

This is why it's rallying now, because traders and investors are quickly beginning to realize its potential.

From \$2.41, it could potentially rise to \$3 in the next few weeks, and potentially see out the year at around \$5.

Render Token Price Prediction 2023

If the platform welcomes a thriving userbase and a spike in the rate of adoptions and collaborations, Render Token might see impressive growth throughout 2023.

As per our Render Token price prediction 2023, Render Token is expected to reach a possible high of \$3.78 by the end of 2023. We forecast a minimum price of \$2.90 and an average price of \$2.54.

Render Token Price Prediction 2025

Render looks well-positioned to reach its full potential in the coming years. If Render token manages to attract investors and whalestats with its developmental and community-building initiatives, RNDR might experience a significant increase in 2025.

Based on our Render Token price prediction 2025, Render Token should be worth at least \$6.65 in 2025, and the maximum price could be \$7.70. The estimated average price could be \$6.86.

Render Token Price Prediction 2030

The Render ecosystem is actively growing with new users and may remain viable in the long term. Our Render Token price prediction 2030 forecasts that at the very highest, Render Token price may reach \$15.06 by 2030. The minimum price could be \$13.41, averaging out at \$13.87.

In closing, please know the figures are generated using our price prediction tool and in that matter, not a guarantee, that the actual price action will follow what we mentioned. Forecasts are not immune to changing circumstances and will be updated with new developments. Always do your own research and evaluate all necessary factors before making any investment.

FAQs

Is Render Token a good investment?

Render proved to be one of the most talked about coins in the crypto space this past year. With this in mind, it is wise to say that RNDR is a good choice of investment. Besides, the coin has solid fundamentals and great rendering capabilities which makes it good long-term hold. Again, DYOR before opening a trade.

Can Render Token reach \$1000?

No. According to our analysis, there is no evidence that Render Token will reach \$1000.

Can Render Token reach \$100?

To reach \$100, Render Token needs to rise 41x from its current price. It reached its all-time high of \$7.8 in November 2021, growing by around 16.25 times in five months (from the lowest price of \$0.48 in June 2021). Thus, it grew by 3.25 times in one month. Therefore, RNDR will require less than 13 months to reach \$100. In theory, this is feasible, but there are practical challenges and there has to be significant progress in Render use cases to justify these levels.

Where can I buy Render (RNDR)?

Notable options for purchasing Render token include Binance, BTCC and Coinbase. Among these, [BTCC](#) is one of the best exchanges as it witnesses a large trading volume of RNDR. Compared to another two big exchanges, BTCC has no regulatory concerns and is available in U.S., Canada and many other countries in Europe. Furthermore, [BTCC exchange](#) is highly recommended due to its favourable attributes such as extremely low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.

In order to trade [RNDR/USDT](#) on [BTCC](#), you need to first [register](#) an account. And you need to have some USDT in your crypto wallet, or you can directly [buy](#) it on BTCC. Once you have USDT, you can trade [RNDRUSDT Perpetual Contracts](#) on BTCC with a leverage up to 50x. The transaction is safe, cheap, and fast with VERY easy steps. You can also choose to deposit [RNDR](#) with a minimum single deposit of 115RNDR.
