The Sandbox (SAND) Price Prediction 2023, 2025, 2030: Is SAND a Good Investment?

Original:

<https://www.btcc.com/en-US/academy/research-analysis/sandbox-price-prediction-2023-2025-2030-is-sandbox-still-a-good-investment>

The [Sandbox \(SAND\)](#) is a popular play-to-earn game that combines [blockchain technology](#) and non-fungible tokens ([NFTs](#)) in a 3D [metaverse](#), where users can create and monetize in-game assets and experiences. This guide will offer you the latest [Sandbox](#) price prediction for 2023, 2025 and 2030, and its projected growth from fundamental analysis to price history.

The SAND price prediction has always been a concern to the marketers and investors. Since its launch, SAND has been steadily rising in price before the crypto winter began. Facebook's rebranding to 'Meta' added fuel to its bullish inclinations as the investors and users saw potential in its metaverse.

Will Sandbox be able to leverage the growing interest in Metaverses and repeat the success of October 2021? At the end of this review, a clear picture will emerge as to how high the SAND coin will go. We will try to answer these frequently asked questions: Is Sandbox a good investment? Can Sandbox reach \$100 or what will Sandbox be worth in 2025/2030?

Trade on BTCC with 10 FREE USDT.

What is The Sandbox?

The Sandbox is a Ethereum-powered metaverse Game-Fi platform where players can buy virtual land, create digital worlds and monetize gaming experiences.

Established by founders of games studio Pixowl in 2011, the metaverse game's mobile app has generated 40 million+ downloads across iOS and Android. It is one of the most prominent virtual world ecosystems wherein over a million users are active over a single month.

All the elements created in the metaverse are represented as NFTs. Players can design and build their own NFTs and monetize these NFTs by trading them on the Sandbox. The goal of The Sandbox is to give creators true ownership of their NFTs creations and reward them for taking part in the ecosystem.

So far, The Sandbox has established significant partnerships with major brands and celebrities to build its use case profile, such as Gucci, popular US rapper Snoop Dogg, and famous TV series The Walking Dead. The collaboration is increasing this year. In March, top bank HSBC bought its first plot of digital land in the Sandbox metaverse.

Additionally, Both LAND and SAND are fully supported on Polygon's network. Thus, users can interact with all the Sandbox tokens in a single place.

It is believed that the growth potential for The Sandbox is huge.

As per a recent McKinsey & Company report, Global spending in the metaverse could reach \$5 trillion by 2030. Furthermore, Citi Bank's analysts identified investment opportunities after acknowledging the Metaverse's potential in its recent report. It predicts the Metaverse-related economy to be as much as \$13 trillion.

These outcomes could ultimately put The Sandbox in a good position to capture a sizeable portion of the increasing market.

The Sandbox Latest News

- The SEC ramped up its crypto enforcement this week, targeting leading exchanges Binance and Coinbase with lawsuits on back-to-back days. As part of the action, a slew of tokens has been named by the SEC as unregistered securities—including SAND from the Sandbox metaverse game.
- Sebastien Borget, the COO of The Sandbox, expressed enthusiasm about the Apple Vision Pro Augmented Reality Headset at the Apple Worldwide Developers Conference (WWDC2023), dubbing it as a “groundbreaking” development in the field. This mixed reality (MR) device, which fuses virtual reality (VR) and augmented reality (AR), was announced by the tech behemoth to be released in 2024.

How Does The Sandbox Work?

In essence, the metaverse game itself is split into three parts:

- **VoxEdit** - powerful free 3D voxel modeling and NFT creation package for PC/Mac allowing users to create and animate 3D objects such as humans, animals, vehicles, and tools. These are then exported into The Sandbox's Marketplace, where they become game ASSETS and are sold as NFTs.
- **Marketplace** - a location where users can upload, publish and sell their ASSETS (NFT creations) made with VoxEdit.
- **Game Maker** - a visual scripting tool board allowing users to create and test their 3D games for free without the need to code. In The Sandbox, the ASSETS will be given predefined behaviours through visual scripting nodes. Thus, players are able to turn their LAND into a potential full game experience.

The LAND is a unique feature of The Sandbox metaverse, as it allows users to truly own and control the virtual land they build on. Each LAND represents a 96×96 meter digital tract in the virtual world, which players can purchase and then use to build their own games or experiences. There are 166,464 land parcels in total, and an estate is created when a player merges many LANDs into a single property.

This innovative use of NFTs provides users with greater control and ownership over their NFT creations while enabling a thriving economy of virtual land ownership and exchange. When the company made the sales of LAND tokens public, around 23% of the map was sold out within minutes, in excess of \$1 million in sales.

What Are The Sandbox's Tokens?

By creating an ecosystem for tokenized game assets, Sandbox uses three main tokens to ensure a circular economy between all the profiles of users who interact with the platform:

- **SAND** - an ERC-20 token that powers all transactions and interactions inside the ecosystem.

- **LAND** - a digital piece of real estate in the Sandbox metaverse represented by ERC-721 token. Each LAND is a unique NFT, ensuring that users have full ownership and control over their virtual plots.
- **ASSETS** - various creation elements that players build in Sandbox's Voxedit and are represented by ERC-1155 tokens. Creators can earn SAND tokens by trading the ASSETS on the Marketplace.

SAND is the native utility token of The Sandbox platform and is one of the essential tools to get a whole metaverse experience. As a necessity for any commercial activity on the platform, SAND allows users to play games, make in-game purchases and customise their avatars or other equipment. This token also helps users trade LAND and ASSETS. Let's see how the monetizing works.

Players can use SAND tokens to buy LAND, which they can develop and trade on the metaverse. They can populate their LANDs with ASSETS and games to significantly increase the utility and attract more users. The more the population increases, the higher the price will be, increasing the value for the LAND owner. And then players can earn SAND tokens by selling their LANDs, renting them out, or building and monetizing games through the GAME MAKER function on the LAND.

Lastly, SAND is also charged to upload ASSETS on the marketplace and purchase Gems & Catalysts, two additional ERC-20 tokens required to construct ASSETS. Catalysts are created to establish your ASSETS' tier and scarcity. Gems are used to define your ASSET's attributes. The more attributes your ASSETS have, the more useful they are in the Sandbox, and thus incrementing their value. Users can purchase GEMS from other players via The Sandbox Marketplace, or by staking \$SAND on LAND.

Yes, SAND tokens are allowed to be staked by users to earn additional SAND and Gems & Catalysts that are crucial for ASSET creation.

SAND Coin Price History

The Sandbox to USD Chart

SAND price history from launch to present - Credit: CoinMarketCap

Now let's take a quick look at the SAND price history. While past performance should never be taken as an indicator of future results, knowing what the crypto has done in the past can give us some much-needed context when it comes to either making or interpreting a SAND crypto price prediction.

SAND went live on 15 August 2020 at \$0.051, and then in 2021, the token experienced its biggest rally to date with the bull market. SAND price rocketed to its all-time high of \$8.44 on 25 November 2021, a 16,387% surge since launch.

Following an overall drop in Bitcoin and Ether prices at the start of December, SAND also fell more than 40% to \$4.78 by mid-month, despite having secured partnerships with 10 exchanges, as well as a MAUER NFT collection memorialising the Berlin wall. And eventually SAND crypto ended 2021 at just under \$6, recording significant gains in the year.

While 2021 was, ultimately, a positive year for the crypto industry, 2022 was a year which saw disaster strike both The Sandbox and the sector as a whole. SAND was all downhill from early January and dropped quickly. The token has been fluctuating below the \$1 mark since May due to the collapse of Terra Luna. With more crypto bankruptcy news confirming the bear market, SAND

price dropped to a low of \$0.7379 on 18 June. Then in November, the collapse of the FTX (FTT) exchange caused yet another crypto crash, with SAND closing the year at \$0.38, down more than 90% over the course of the year.

Sandbox Price Analysis

At the time of writing, SAND is trading at \$0.3956 with a market capitalization of \$733,823,505, making it the 52nd largest crypto by that metric. In the past 24 hours, the price of Sandbox has increased 3.62% with a trading volume of \$85,474,323.

The impact of regulatory pressure is evident in the dramatic crash of The Sandbox token. With its price plunging to a mere \$0.3956, the token has already experienced a significant decline of 24.0% since last week. This steep drop has left investors anxious about the token's future and raises questions about the potential for further price erosion.

From this year's perspective, the altcoin still needs more momentum and strength to begin a bullish trend. Since there is no significant accumulation or distribution going on, for long-term investors, it might be a good idea to buy the dips and increase positions over time near the oversold price range.

The Sandbox and other metaverse projects have been on the down and out for roughly a year now due to extreme crypto market conditions. Less liquidity in the markets has reduced speculative investing. Owning property in the metaverse or buying metaverse native token is about as speculative as it gets. Still, many developers are actively working on creating the future of digital worlds. There remains a ton of potential in the metaverse sector, and The Sandbox is off to an early lead.

The developers need to introduce new products and instruments expanding the possibilities of the platform. This will attract new investors and partners from DEX, NFT and GameFi segments to the project. Accordingly, the number of users will increase and drive the quotes up. With the transition from the social networking model to virtual reality, the popularity of Sandbox class platforms will also increase.

The recent accusations and regulatory actions against Binance and Coinbase have created a climate of fear and uncertainty within the cryptocurrency market. The Sandbox price crash serves as a stark reminder of the potential consequences of regulatory scrutiny. While the future of The Sandbox token remains uncertain, it is important to recognize the inherent volatility of the crypto market and the potential for industry adaptation. Investors should approach the market with caution, stay informed, and carefully monitor regulatory developments to navigate these challenging times successfully.

SAND Price Prediction 2023, 2025, 2030

We've covered most of the important things you need to know about The Sandbox (SAND) before considering the Sandbox coin price prediction. If you are really interested in investing in the coin, this is the time to be more attentive. Do note, however, that predictions are not a substitute for your own research and due diligence.

To help you decide whether SAND is a good crypto to buy today, here are some key targets it may reach before the end of 2030:

YEAR	MINIMUM PRICE	MAXIMUM PRICE
2023	\$0.69	\$0.95
2025	\$1.73	\$2.02
2030	\$4.56	\$4.85

[TRADE_PLUGIN]SANDUSDT,BTCUSDT[/TRADE_PLUGIN]

Sandbox Price Prediction 2023

As per our Sandbox price prediction 2023, Sandbox is expected to reach a possible high of \$0.95 by the end of 2023. We forecast a minimum price of \$0.69 and an average price of \$0.75.

[Download App for Android](#)

[Download App for iOS](#)

Sandbox Price Prediction 2025

The Sandbox looks well-positioned to reach its full potential in the coming years. If the metaverse successfully boosts market sentiment among crypto enthusiasts, Sandbox price could continue to rise for the next five years.

Based on the technical analysis by crypto experts, Sandbox should be worth at least \$1.73 in 2025, and the maximum price could be \$2.02. Our Sandbox price prediction 2025 estimates that the coin may have an average price of \$1.84 for the year.

Sandbox Price Prediction 2030

The Sandbox ecosystem is actively growing with new users and brand partnerships and will remain viable in the long term. Our Sandbox price prediction 2030 forecasts that at the very highest, Sandbox price may go up to \$4.85 by 2030. The minimum price could be \$4.56, averaging out at \$4.68.

Changelly made a more bullish SAND price prediction 2030, estimating that SAND could trade between \$12.33 and \$15.03 in 2030, based on its deep AI-assisted technical analysis.

Here, it's worth pointing out that 2030 is still a long way away. 7 years down the line, the crypto market could be affected by a host of different events and updates, each of which is difficult to ascertain. Ergo, it's best that predictions like these are taken with a pinch of salt.

SAND Coin Price Prediction: Experts' Opinion

Now, let's take a quick look at what experts say about the the Sandbox price forecasts.

First, *Gov Capital* made a Sandbox crypto price prediction that said the token could be \$4.61 in a year. Its five-year forecast was \$28.12.

Next, *PricePrediction* made The Sandbox price prediction that said the token could average at \$0.67 this year and \$1 next year. In its Sandbox price prediction for 2025, the site said SAND could be worth about \$1.44, reaching \$2.08 in 2026.

By 2027, the forecast indicated that the token could trade at an average of \$2.93, potentially hitting \$4.34 the following year. The site then went on to make a Sandbox price prediction for 2030 that said it could be trading at \$8.57 in 2030 before reaching a potential \$12.09 in 2031.

Meanwhile, *CaptainAltCoin* said in its Sandbox price prediction for 2023 that the token could close the year at \$0.73. By January 2024, the site said it could be worth \$0.73. The site made a SAND price prediction for 2025 of \$2.14, before suggesting SAND could rise to \$5.34 by 2030.

The site went to stick its neck out and suggest a Sandbox crypto price prediction for 2040 of \$10.69.

Finally, *Wallet Investor* has a rather more bearish long-term outlook for the coin. In its SAND crypto price prediction, the metaverse token could slump somewhat over the course of the next 12 months, to trade at a minimum price of \$0.0543 by January 2024.

Sandbox Price Prediction \$100: Can Sandbox Reach \$100 Dollars?

The crypto market is notoriously volatile, and predicting future prices is always a challenge.

For SAND to go as high as \$100, it will require significant levels of adoption. From current Sandbox price prediction, we think it is unrealistic and far-fetched for Sandbox to reach \$100. But we do believe that SAND coin can reach \$10.

One of the main factors that will affect the price of Sandbox is the growth of NFT gaming industry. The NFT market is growing at a tremendous rate since 2020. For instance, data suggests that the size of the NFT market in 2020 was \$232M and it dramatically reached a value of \$22B by 2021. Furthermore, reports suggest that the NFT market will grow at a CAGR (Compound Annual Growth Rate) of 23.9% till 2028 while NFT Gaming Market will grow at 32.5% CAGR in the next 5 years. The growth in NFT Gaming Market is indeed a piece of positive news for Sandbox and its competitors.

[Download App for Android](#)

[Download App for iOS](#)

Sandbox Price Prediction \$10: Can Sandbox Reach \$10?

Price movements are always one of the crucial factors to determine and predict the price of crypto. As we mentioned above, SAND came onto the open market in August 2020 at \$0.051 and hit its all-time high of \$8.44 in November 2021, meaning that it only took 15 months for Sandbox to reach its peak price at \$8.44, almost a 99% growth from its launch price.

SAND currently stands at \$0.3956. To reach \$10, Sandbox needs to grow by 96%. Theoretically, considering a growth rate of 99% (which SAND showed to reach its all-time value) that it completed in mere 15 months, it might take another 14 months to reach a target of \$10.

However, it is just fantasy projection and it is not the only factor to consider. In reality, there are practical challenges and there has to be significant progress in Sandbox use cases to justify these

levels.

Though Sandbox has a lot to offer to gamers in terms of the gaming environment and is indeed overperforming its competitors at the moment, it certainly needs much time to reach a value of \$10.

According to our analysis, Sandbox appears to be positioned for long-term success as a Metaverse project, and \$10 seems like a realistic goal in the future. But we do not expect Sandbox price to reach \$10 anytime before 2030. However, a bull rally may help SAND to reach its target before our price analysis. Everything could happen in the crypto market.

How is Sandbox Different from the Rest of the Metaverse Gaming Projects?

- The Sandbox metaverse is unique mainly because it introduces blockchain technology and decentralized architecture to the world of gaming, offering the advantages of true ownership, digital scarcity, interoperability, and monetization capabilities.
- In this virtual world, gamers would create and collect blockchain-based digital assets, essentially revolutionizing the gaming market. All in-game assets are represented by NFTs, which secure the ownership of players and collectors.
- Sandbox not just serves as a gaming platform but also enables users to buy, sell, rent digital land, and be rewarded. Users are free to create their 3D gaming environments and digital objects in the land based on their ideas, which can be monetized in the game. Sandbox offers a set of tools made to make it easier for players to engage in encounters across the metaverse.
- Apart from this, Sandbox has a very talented team working to make Sandbox one of the best metaverse platforms. It also has tremendous community support, which is still growing.

[Download App for Android](#)

[Download App for iOS](#)

Decentraland vs Sandbox

The metaverse gaming industry is now overcrowded. Companies like Meta, and Tencent are gradually entering the metaverse gaming world.

[Decentraland](#) is considered as one of the biggest competitors of Sandbox. As of October 2022, Decentraland has reported greater than 56,000 monthly active users, while the number of monthly active players in the case of Sandbox is more than 200,000. To use Sandbox, users have to pay a fee of 5% SAND, which goes to the staking pool and the Foundation to build a good incentive for players and creators. On the contrary, Decentraland charges a fee of 2.5% MANA, which goes to the DAO to manage its virtual world.

Unlike Decentraland, there is no set scenario in The Sandbox. The metaverse platform is not just about creating art and wearables, it is always more focused on game development, which means it has more robust opportunities to offer gamers.

Users of the metaverse platform will be able to create and build land following their desire for a gaming world. Every player can develop his own game spaces in this metaverse. Digital landowners on The Sandbox can monetize their digital assets by selling, renting them out to others or charging users for visiting the facilities.

Sandbox Crypto Price Prediction: Conclusion

Sandbox is one of the most fabulous metaverse projects incorporating games, NFTs, and cryptocurrencies. The idea of monetizing the virtual world in-game assets is gaining market recognition as the future of gaming. The Sandbox will undoubtedly reach new levels if it is capable of capturing the resulting opportunities to attract increased user interest in the coming years.

Particularly, The Sandbox could be a potentially good investment for risk-tolerant investors who are looking for a metaverse-blockchain play. If you are a games player, and you like the idea of making and selling your own NFTs, there are certainly attractions to The Sandbox.

Going forward, our SAND coin price prediction model shows that the crypto could anticipate massive growth and make great profits in the future, with the growing of metaverse and NFTs.

However, it is important to note that we are betting on the future of virtual reality and the metaverse still has uncertainties, and the success of Sandbox will depend on its ability to grow its user base, attract developers, and build its platform.

Our advise is to have a very small amount of SAND in your portfolio. If Metaverse becomes a reality and it gets adoption, we might see SAND crypto skyrocket, and now that the price is down, it is a wise investment to make.

In closing, please know the forecast figures are generated using our price prediction tool and in that matter, not a guarantee, that the actual price action will follow what we mentioned. Forecasts are not immune to changing circumstances and will be updated with new developments. Always do your own research and evaluate all necessary factors before making any investment.

The Sandbox Price Prediction FAQs

Is SAND coin a good investment?

Yes. As per our analysis, SAND coin could be a good investment as one of the most well-known projects in the Metaverse. As the crypto community becomes more involved in the metaverse, Sandbox price is very likely to gain upward momentum. The adoption of NFTs is also increasing. Thus, it will positively impact the SAND price.

Will The Sandbox go up or down?

It is hard to say. While Sand price predictions from the likes of CaptainAltCoin were upbeat as of 13 June 2023, other sites like WalletInvestor struck a far more bearish tone. In general, SAND token does have higher probability of going up than down because of the good use case, well-designed tokenomics, active community and a solid team behind it.

However, please remember that the crypto market can change anytime and a variety of elements will influence the potential development of Sandbox, thus the prices may, and do, go down as well as up.

Will Sandbox reach \$1000?

No. According to our analysis, there is no evidence that Sandbox will reach \$1000. It is unlikely that the coin will drive large-scale token usage in a short term.

How high can Sandbox go?

As per our Sandbox coin price prediction, SAND can possibly reach an average price of \$0.75 this year. Over the next 5 years, it is predicted that SAND token may reach a maximum price of \$3.97.

How much will Sandbox be worth in 2023?

In 2023, Sandbox price is estimated to reach \$0.69, at minimum, and the maximum price could be \$0.95, according to our the SAND price prediction 2023.

What will Sandbox be worth in 2025?

Our SAND price prediction 2025 forecasts the coin to trade between \$1.73 and \$2.02 by 2025. The average price of SAND might go to \$1.84 by the end of 2025.

What's the price of The Sandbox by 2030?

According to our SAND coin price prediction 2030, SAND is expected to reach a maximum price of \$4.85 by the end of 2030.

Should you consider buying SAND?

Given its recent partnerships and collaborations that have improved its adoption, Sandbox is an excellent cryptocurrency to invest in this year. However, currently the coin still needs to find renewed buying pressure to escape the shackles of its descending broadening wedge. Be on the lookout for the latest market changes before investing in any coin.

Does Sandbox have a future?

Yes. Sandbox will have a promising future due to the rapid growth of The Sandbox ecosystem. As metaverse and play-to-earn crypto games are gaining increasing popularity every day, we believe that projects like The Sandbox, Decentraland, and others will likely have a significant place to stake in the future.

Where can I buy The Sandbox (SAND)?

Notable options for purchasing SAND coin include Binance, BTCC and KuCoin. Among these, [BTCC](#) is one of the best exchanges as it witnesses a large trading volume of SAND. Compared to Binance, BTCC has no regulatory concerns and is available in U.S., Canada and many other countries in Europe. Furthermore, [BTCC exchange](#) is highly recommended due to its favourable attributes such as extremely low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.

In order to trade [SAND/USDT](#) on [BTCC](#), you need to first [register](#) an account. And you need to have some USDT in your crypto wallet, or you can directly [buy](#) it on BTCC. Once you have USDT, you can trade [SANDUSDT Perpetual Contracts](#) on BTCC with a leverage up to 50x. The transaction is safe, cheap, and fast with VERY easy steps. You can also choose to deposit [SAND](#) with a minimum single deposit of 500SAND.

[Buy SAND Now](#)

[GET 10,055 USDT DEPOSIT BONUS](#)

What are BTCC's specs?

Sometimes, users feel more comfortable working with an exchange if they know that the exchange has a footprint in the industry. With 12 years of stable and secure operating history, [BTCC](#) is one of the [top cryptocurrency derivatives exchanges](#) in CoinMarketCap, which boasts a wide selection of 60+ cryptocurrencies and millions of registered users, offering services in 100+ countries.

[BTCC](#) charges 0.06% for both takers and makers, which are way below the industry average. According to the largest and most recent empirical study on crypto exchange trading fees, the average spot trading taker fee is 0.2294% and the maker fee is 0.1854%.

With high liquidity, low trading fees and fast transaction speed, BTCC allows users to open a trade immediately even when the crypto markets experience a sharp rise or plunge.

Apart from crypto trading, BTCC also supports tokenized futures service, allowing users to trade [stocks](#) and commodities futures ([Gold/Silver](#)) with USDT as the margin. The maximum leverage is up to 150x.

Trading on BTCC begins with [registration](#) and log in, which only takes 30 seconds. New customers can now sign up [here](#) to get a welcome bonus of 10 USDT, and complete the KYC verification to

access all BTCC's features and [BTCC bonus](#). Once verified, you can start [trading SAND](#) now.
