What is SSV Network?

Blockchain technology and by extension cryptocurrency, are linked with the idea of Web3. This is either the upcoming or ongoing – depending on who you speak to – stage of the internet characterised by a move away from big companies controlling data and towards people taking control of their own information.

As perhaps befits a brave new online world characterised by decentralisation, the blockchain is, at least for the most part, operated by people who might well do other things for a living. These people supply computers, or nodes, which operate on their particular part of the blockchain.

While operating a node requires a certain amount of expertise, or at least computing power, once you have those things you are basically sorted and can get involved in operating on the blockchain.

However, there are some potential issues. For instance, it can be pretty difficult to operate a node and get involved in staking coins and tokens in order to earn more money. Additionally, if you want to operate a node but are unable to do so on a full-time basis, it can be hard to share responsibilities and pay on a crypto system.

The SSV Network was set up in an attempt to deal with those two problems.

The idea behind the platform is that people can share their nodes and stake their crypto. As the whitepaper says:

“In order for a validator to earn ETH rewards by signing data transactions, it must remain online and available. In the current Ethereum staking ecosystem, due to strict protocol rules, a validator must run on one node only and this presents a single point of failure. By splitting the validator key into multiple KeyShares and distributing those KeyShares to multiple nodes, if one node goes offline for routine maintenance or because of a problem, fault tolerance is achieved and the other nodes holding the rest of the KeyShares will respond to keep the validator operating. This results in a slashing-free, decentralised staking environment.”

As a blockchain-based platform, the SSV Network needs to have its own native cryptocurrency and the conveniently-named, if idiosyncratically-punctuated ssv.network token, also known as SSV.

The crypto can be used to pay for transactions on the platform and holders have the right to take part in votes on changes to the network. SSV can also be bought, sold and traded on exchanges.

There are three types of users who help make the SSV network operate properly:

- **Operators** manage the protocol, own the physical computers the system needs and maintain the overall health of the network.
- **Stakers** hold Ethereum’s ether (ETH) cryptocurrency and help things work quicker.
- **Holders** hold SSV and can vote on changes to the network, set the platform’s fees and operate its treasury.

The SSV Network operates as a decentralised autonomous organisation (DAO). This means there are no specific people in charge of the network. While this is not too uncommon for crypto platforms, it could be an issue for people who are not used to the world of the blockchain.

A couple of important things to point out. Firstly, SSV operates on the Ethereum blockchain, which means that it is a token rather than a coin. There may be references to things like an ssv.network coin price prediction but, technically speaking, they are wrong. SSV stands for secret shared validators.

Current SSV Network Price

At the time of writing, SSV Network is trading at \$19.68 with a market capitalization of \$139,648,058, ranking #208 amongst all cryptocurrencies by that metric. In the past 24 hours, the SSV coin price has increased by 6.8% with a trading volume of \$12,822,783.

Now let's move on to the SSV coin price prediction for 2023 and beyond.

Where Can I Buy SSV Network (SSV)?

Notable options for purchasing SSV Network coin include Binance, BTCC and so on. Among these, [BTCC](#) is one of the best exchanges as it witnesses a large trading volume of SSV. Compared to [Binance](#), BTCC has no regulatory concerns and is available in U.S., Canada and many other countries in Europe. Furthermore, [BTCC exchange](#) is highly recommended due to its favourable attributes such as extremely low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.

In order to trade [SSV/USDT](#) on [BTCC](#), you need to first [register](#) an account. And you need to have some USDT in your crypto wallet, or you can directly [buy](#) it on BTCC. Once you have USDT, you can trade [SSVUSDT Perpetual Contracts](#) on BTCC with a leverage up to 50x. The transaction is safe, cheap, and fast with VERY easy steps.[TRADE_PLUGIN]SSVUSDT,BTCUSDT[/TRADE_PLUGIN]

What are BTCC's specs?

Sometimes, users feel more comfortable working with an exchange if they know that the exchange has a footprint in the industry. With 12 years of stable and secure operating history, [BTCC](#) is one of the [top cryptocurrency derivatives exchanges](#) in CoinMarketCap, which boasts a wide selection of 60+ cryptocurrencies and millions of registered users, offering services in 100+ countries.

[BTCC](#) charges 0.06% for both takers and makers, which are way below the industry average. According to the largest and most recent empirical study on crypto exchange trading fees, the average spot trading taker fee is 0.2294% and the maker fee is 0.1854%.

With high liquidity, low trading fees and fast transaction speed, BTCC allows users to open a trade immediately even when the crypto markets experience a sharp rise or plunge.

Apart from crypto trading, BTCC also supports tokenized futures service, allowing users to trade [stocks](#) and commodities futures ([Gold/Silver](#)) with USDT as the margin. The maximum leverage is up to 100x.

Trading on BTCC begins with [registration](#) and log in, which only takes 30 seconds. New customers can now sign up [here](#) to get a welcome bonus of 10 USDT, and complete the KYC verification to

access all BTCC's features and [BTCC bonus](#). Once verified, you can start [trading SSV](#) now.
