# **STEPN (GMT) Price Forecst: FAQ**

## **1. Will Stepn GMT increase?**

For any cryptocurrency's price to increase, market conditions must improve. In the past few months, the crypto market as a whole has been under extreme pressure, with no signs of improvement. Given the existing circumstances, it is quite unlikely that the price of STEPN GMT will increase. However, if market conditions improve, there is a risk that the price of STEPN GMT would climb again.

## **2. How to earn money by Stepn?**

As previously stated, a user must download the STEPN app and purchase NFT sneakers in order to earn GMT coins. The sneakers, which are non-fungible tokens (NFTs) and are traded on secondary marketplaces, attract prices ranging from \$400 to \$100,000. This helps STEPN generate income.

## **3. Why are GMT tokens devalued?**

GMT is a governance token that offers users a novel way to earn money. However, like all other cryptocurrencies, GMT is also listed on exchanges where users can purchase and sell tokens. As market conditions improve, investors swarm to purchase GMT tokens, and as market conditions deteriorate, there is a mass sell-off in an effort to limit investment losses. The market condition, which has been below expectations since the beginning of 2022, is thus the primary cause of the price decline.
