---

## How effective have Terra Classic been during the past 5 days and 1 month?

Both [Bitcoin](#) and [Ethereum](#) had significant price increases over the last 24 hours, with Ethereum's increase occurring between Friday and Monday. Thursday saw a surge in Terra Luna Classic's price, but it has since fallen. Due to a slowdown in local events, Terra Classic has faced some difficulties this month. Moreover, other cryptocurrencies have begun to rebound as Ethereum inflated, giving investors a wider range of options. Last but not least, after pumping 80% in a month, investors had little reason to expect another pump from Terra Classic very soon.

Take a look at the fluctuating market capitalization of Terra Classic over the past four weeks. Burn (initial community activity), enhancements declared by the community, or general market movement higher all contributed to the increase in prices. When Burn was the only thing happening in the cryptocurrency market, prices started going down, even though the market as a whole was going up. Last week, Terra Classic's stock price fell short of the market's expectation.

## Is Terra Classic an attractive investment?

Presently, Terra coin projections are extremely bullish. The following projections are contingent on the community's successful plan implementation over the next two weeks. We conclude that, at present, Terra Coin is not a reliable investment. In a matter of weeks, it may prove to be a lucrative investment.

The recent merges into the main dev branch are clarified by @TerraRebels. There has been progress in making the #luncburn available in production code.

## How far can Terra Classic travel?

Assuming a yearly burn rate of 3-4% and community resolution of vision, distinction, and value issues, Terra Classic might increase by as much as 33 times by 2030. In the coming weeks, the community and the Luna Foundation will decide what comes next.
