The Degrain (DGRN) Will Exceed Polkadot (DOT) And Cardano (ADA) in 2023

Original:

<https://www.btcc.com/en-US/academy/research-analysis/the-degrain-dgrn-will-exceed-polkadot-dot-and-cardano-ada-in-2023>

Those looking to become millionaires in the [cryptocurrency](#) market could consider [Degrain](#) (DGRN), [Cardano](#) (ADA), and [Polkadot](#) (DOT). One of these, however, is expected to climb by over 8,000 percent by the end of 2022, according to a leading crypto analyst. Degrain (DGRN) is a newly established currency, so how does it stack up against other major currencies in the market? After selling out of presale Phase One in less than two weeks and selling over 70 million tokens in Phase Two in just under a week, this project appears to be selling out of Phase Two early and producing some billionaires in the making. Phase Two is expected to sell out early.

Holders of Cardano (ADA) sell and buy Degrain presale tokens

Ledger Live, the software used to manage cryptocurrency assets on Ledger hardware wallets, now supports the Cardano (ADA) network's 100 more native tokens, allowing users to buy, transfer, and receive these tokens.

Ledger's statement states that the following tokens are acceptable: Aada DAO Token (ADAO), CLAP (DogeADA), DANA (DANA), Cardano Gold (CG), ADAX (ADA), MILK (MILK), MEOW (MEOW), and MELD (MELD).

"Can be controlled in a similar way to Cardano (ADA) token and benefit from all its speed, security and cheap transaction fees," according to news reports on Cardano (ADA) native tokens. The Cardano (ADA) solution eliminates a layer of complexity while reducing manual errors and transaction costs, according to the company's statement. Even if over a thousand individuals sold their ADA holdings to participate in the Degrain presale, the price of Cardano (ADA) is holding steady at the present time.

Polkadot (DOT) is climbing the ranks a little bit

[Polkadot \(DOT\)](#) has piqued the curiosity of investors due to its participative nature. Developers can connect their own blockchains to Polkadot (DOT) and even create new ones. New technology piques investors' attention when they see developers giddily devouring it.

Due to the fluctuating value of bitcoin and ethereum, investors are usually forced to purchase fractional amounts of each. People are more likely to purchase Polkadot (DOT) since it is more reasonably priced at \$8.76.

Bitcoin and Ethereum will lose market share to newcomers like Polkadot (DOT) as interest in cryptocurrencies develops. In 2021, Ethereum will outpace bitcoin in terms of growth. Emerging blockchain networks that provide alternatives to Ethereum, dubbed "Ethereum killers" by some, are becoming increasingly popular among investors.

2022 will be a great year to invest in Degrain (DGRN)

Degrain is expected to be one of the top ten cryptocurrencies in the next several years. Phase two of the pre-sale is going well, just like phase one, with the network's market value rising from \$0.01 to \$0.07.

Early investors in Degrain (DGRN) might expect a number of long-term benefits from the company. The pre-sale for the commodity is currently in its second phase, with a value of \$0.06. According to cryptocurrency researchers, investors' profits are predicted to rise by a factor of 8,000 before the end of the year. For the following year, the team will be unable to sell any of its tokens, and it is planned that liquidity be locked for the next ten years. For the year 2022, we think this is the greatest investment to make.
