Top 3 Cryptocurrencies with Rapid Growth in Bear Market

Original:

<https://www.btcc.com/en-US/academy/research-analysis/top-3-cryptocurrencies-with-rapid-growth-in-bear-market>

Cryptocurrencies such as EverGrow, BNB and Tron focus on driving profits in the bear market. After losing \$500billion, the cryptocurrency industry entered a new bear market.

Since last July, the market value of [cryptocurrency](#) has not reached the level of \$1.25 trillion. Although the prices of most of the major cryptocurrencies have fallen in the past few weeks, three cryptocurrencies are growing rapidly even in a bear market. They are EverGrow Coin, BNB and Tron (TRX).

EverGrow Coin's Price Rose by 40%

Yesterday, EverGrow Coin, pumped water at a price of up to 40% in a few hours. On the digifinex exchange, the price of EverGrow Coin, rose from US \$0.000000255 to US \$0.000000358. The price on coinmarketcap is often fluctuating for EverGrow Coin, because it switches between CEX and DEX prices.

For example, although the coinmarketcap shows that the current price of EverGrow Coin, is \$0.0000002711, in fact, the price in digifinex is \$0.0000003445. Most transactions of EverGrow Coin, take place in digifinex.

EverGrow Coin, is a leading hyperdeflationary token, which is reflected by busd on the binance BNB chain. Since its launch in September last year, the project has paid more than \$37million of busd reflection from the 8% transaction tax.

EverGrow Coin, will further raise its price this year because it has launched the first of a set of applications in its ecosystem – the lunasky NFT market is expected to come at any time.

BNB is Up 3% Today

So far, BNB is the main cryptocurrency with rapid growth. When bitcoin, Ethereum, XRP, Cardano and Solana were all at a loss, BNB rose 3% today. In the past week, BNB's price has actually increased by 10%. BNB is the native token of the binance ecosystem, which provides power for its binance cryptocurrency exchange – the largest cryptocurrency exchange in the world in terms of daily trading volume.

Binance has become one of the most secure cryptocurrency networks in the industry. The current price of BNB is \$331, up from a low of \$227 during the cryptocurrency crash. Just before the collapse of cryptocurrency, BNB's price was \$364 and quickly recovered its losses.

Tron Flip Shiba Inu

After the dramatic collapse of Terra Luna and UST, Tron (TRX) jumped to the top 20 of cryptocurrencies. Tron not only maintained its position, but also flipped Shiba Inu and Dai in recent days and found a seat in the 14th largest cryptocurrency by market value (US \$7.65 billion). Tron is now approaching avalanche, and the market value between them is only more than \$100million.

Tron (TRX) rose 1% in the past day and 12% in the past week. The growth of Tron even exceeded that of BNB. However, BNB's market value exceeded 54billion US dollars, which was even better. Tron was launched in 2017 to provide full ownership for creators of digital content – for example, to encourage consumers to reward content creators directly without intermediaries.

The project now has its own decentralized blockchain with DAPP and smart contract functions. The network hosts decentralized games, streaming media services, app stores and music websites, and is used on BitTorrent, a file sharing service.
