What Is xMoney (UTK)?

Founded in August 2017 by Nuno Correia and Roberto Machado, xMoney (formerly known as Utrust) is a leading web3 payment solution designed to modernize the finance and payments industry and solve the problems of traditional payment methods, while offering both fiat and crypto solutions for all worlds.

The project aims to build a system that enables fast and seamless crypto transactions at low fees, thus enabling merchants to contact a large number of cryptocurrency holders.

By leveraging cutting-edge technology and a strategic partnership with MultiversX, xMoney enables individuals and businesses to optimize their payment processes, drive growth, and deliver exceptional experiences to their customers. With a commitment to innovation and excellence, xMoney continues to lead the transformation of the financial industry.

How Does xMoney Work?

xMoney transactions begin with buyers, who first search for merchants that accept cryptocurrencies. Through the merchant's website, they can see if xMoney is an integrated application.

At this point, the buyer is charged for a total payment fee, which includes a 1% commission and conversion fee. This is used to convert cryptocurrencies into fiat currencies at their own conversion rate.

After the purchase is completed, the fiat currency will be held in escrow (a contractual agreement) and is only released after a holding period (pending a dispute in the transaction). Finally, the seller receives the payment in fiat currency, which he can withdraw or convert into other cryptocurrencies.

What Is The UTK Token?

The xMoney platform supports different digital currencies and their native token, \$UTK, which is built on the Ethereum blockchain. If paying with UTK tokens, xMoney users can pay for goods and services without paying exchange rate fees, which provides further utility and promotes the use of UTK tokens. Since a portion of UTK token is burned with each transaction, the total supply of UTK decreases, resulting in a decrease in circulation supply. The more the transaction throughput, the better the performance of the token is.

It is worth noting that UTK is an ERC-20 standard token that exists on the Ethereum blockchain. As a result, it enjoys a high level of interoperability in the market.
