XRP Future Price Prediction for 2023, 2025, 2030: Will XRP Skyrocket?

Original:

<https://www.btcc.com/en-US/academy/research-analysis/xrp-price-prediction-2023-2025-2030-can-xrp-reach-100>

The final verdict in the Ripple vs. SEC lawsuit was finally made after a long-running litigation. On July 13, Judge Torres ruled that Ripple's XRP is not a security when sold to the general public but ONLY when sold to institutional investors. In the wake of this, it seems like everyone is searching for XRP future price prediction after lawsuit.

Latest XRP News

1. The Ripple vs. SEC lawsuit finally ended, with Judge Torre ruling that Ripple's token XRP is not a security when sold to the general public but ONLY when sold to institutional investors. The ruling marks a partial win for the SEC and a clear win for Ripple holders.

2. The XRP price exploded on the news, shooting up 49% from a previous low of \$0.47 to a current high of \$0.70 as investors reacted to the significant development in the lawsuit. It also recorded the largest crypto asset hourly volume, reaching 2 billion after court summary judgment.

3. After the court's decision broke, Gemini exchange indicated in a Twitter post: "Given today's ruling that the sale of XRP on exchanges is not a security, Gemini is exploring the listing of XRP for

both spot and derivatives trading.”

Ripple lawyer John E Deaton did not miss the opportunity to champion for XRP, sending a call to action to exchanges such as Coinbase, Kraken, and Crypto.com to list the remittance token. In his words, “...every exchange in the US should relist XRP in solidarity with today’s decision.”

Interestingly Coinbase Exchange has heeded the call, committing to re-enable trading for Ripple tokens on the XRP network. The announcement also details that trading could begin on the same day, provided liquidity conditions are met.

4. XRP token has reportedly won a listing on iTrustCapital, a leading digital asset IRA software platform for cryptocurrency and physical precious metals transactions.

5. XRP’s partially victory has boded well for altcoins recently labeled securities. Specifically, [Cardano\(ADA\)](#), [Solana \(SOL\)](#), and [Polygon \(MATIC\)](#) all shared in the excitement with around 10% gains each on the same day.

XRP Price History - Key Points

- XRP launched with an initial price of \$0.005875 in 2013.
- The price surged to \$0.33 in 2017.
- XRP reached an all-time high of \$3.84 on 4 Jan 2018.
- During the 2021 bull market, the XRP price was suppressed due to the Ripple- SEC lawsuit.
- The current price is \$0.70, down 82% from its ATH.

A promotional banner for BTCC, a crypto futures exchange. The background is green with a faint grid pattern. At the top center is the BTCC logo (a white 'X' inside a square) followed by the text 'BTCC' in white. Below the logo, the text 'Level up your VIP status for more benefits' is written in yellow. Underneath that, 'BTCC - Your preferred crypto futures exchange' is written in white. At the bottom left, there is a button that says 'Download our app now' next to a Bitcoin icon. In the center, there are two buttons: 'Available on the App Store' with the Apple logo and 'GET IT ON Google Play' with the Google Play logo. At the bottom right, there is a button that says 'Support fiat and crypto deposits' next to a stack of gold coins.

Current XRP Price Analysis

As we know, the final outcome of the SEC vs. Ripple lawsuit has been the most highly anticipated in the crypto ecosystem.

Judge Torres has finally made the decision lately, ruling that XRP is not necessarily a security. Based on the judgment, the Ripple's XRP can only be security when sold to institutional investors. While the news represents a partial win for the SEC, the XRP community is elated with dramatic price gains to show for it.

This ruling is considered a landmark decision that could have massive implications for the industry. Gemini's executives have lauded the court for beating the SEC and Chair in writing clear rules for cryptocurrency.

The XRP price shows a stark bullishness on all timeframes as investors reacted to the news. Today, XRP is one of the hottest cryptocurrencies and has climbed to the 5th largest crypto by market cap.

At the time of writing, XRP stands at \$0.70 with a market capitalization of 36,841,497,253. In the past 24 hours, XRP price has increased by 1.25% with a trading volume of 1,244,433,076. In the past 30 days, it has soared by 44.4%.

The current price means that XRP token has breached crucial barriers and reclaimed levels last seen in May 2022 before the Terra Luna collapse. The positivity surrounding Ripple's case with the SEC has helped the altcoin gain by 106% since the beginning of the year.

One of the key drivers to actualize this impulse would be the ongoing bold moves by exchanges to list and relist XRP. After Judge Torres released her summary judgment articulating a distinction between token sales to institutional investors versus to the general public, crypto executives now demonstrate a willingness to list XRP.

It is worth noting that top exchange like Coinbase is among those having relisted XRP for trading.

XRP is likely to be boosted in the medium-term by the positive ruling, which cleared a substantial part of Ripple's operations from being targeted by the SEC's crackdown.

Indeed, until this point, Ripple has been able to grow its business even under the shadow of the

case, which would imply that it could expand even faster since the case has ended and it's free to operate normally.

In addition, the technical outlook also indicates strong bullish strength, with demand and accumulation showing significant positivity. An increase in buying pressure could see XRP price hit \$1 soon.

Some XRP holders have predicted that a full-blown bull market next year may even see it beat its historical all-time high of \$3.40.

Nevertheless, a threat of profit-taking may also interrupt the rally. Here traders and investors should exercise caution and closely monitor the price action to make informed decisions in the coming days.

XRP Price Prediction 2023

Previously, due to the SEC lawsuit, many investors were holding back their move into Ripple. Now a partial win for Ripple has increased the regulatory clarity, opening the gates for more adoption of XRP. This could lead to a much higher price for XRP.

With this win, the growing confidence has improved the Ripple market sentiment, making the XRP price prediction for 2023 highly bullish.

A bullish reversal at breakneck speed projects a high likelihood of XRP price crossing \$1 by the end of 2023.

According to our XRP price prediction 2023, the growing positive sentiment for Ripple will propel the XRP price to \$1.06 by the end of 2023.

Even on the flip side, the highly motivated XRP buyers will hold the XRP price at \$0.89 by the end of 2023.

XRP Price Prediction 2025

With the remittances market growing every year, XRP is set to capitalize on its gains in the cross-border payments market. With low transaction fees and ultra-fast transactions, exponential growth is possible for XRP in 2025.

This growth could be facilitated by Ripple's continuous partnerships with major financial institutions and its further integration into their payment systems, enhancing the utility and demand for XRP.

Moreover, the growth during this period could be propelled by Ripple's potential expansion into new use cases, such as smart contracts and decentralized applications (dApps), which would significantly increase the token's value and utility.

Considering these, our XRP price prediction 2025 forecasts that at the very highest, XRP price may

reach \$2.23 by 2025. The minimum price could be \$1.50, with an average price of \$1.55.

XRP Price Prediction 2030

Going forward, XRP undoubtedly has the potential to run in 2030. The main reason is that it has a clear and understandable use case and has already attained partnerships with countless banks, governments and companies.

According to our XRP price prediction 2030, XRP price is forecasted to range between \$4.17 and \$4.88 by 2030. This long-term optimistic view hinges on Ripple's increasing global recognition and adoption. As more institutions and payment systems incorporate Ripple's technology, the demand for XRP could potentially surge, driving its value higher.

Moreover, with the introduction of central bank digital currencies (CBDCs) looming, interest in XRP could soar. This is because XRP could become the global "bridge currency" that can quickly and cheaply facilitate swaps between different CBDCs.

Ripple's ongoing efforts to secure more global partnerships and achieve wider adoption of its technology in the financial industry might play a pivotal role in this anticipated price rise.

XRP Price Prediction \$500: Can XRP Reach \$500?

XRP is the 5th largest cryptocurrency with a market cap of \$36.8 billion. XRP price has suffered over the past few years due to the SEC case against its parent company Ripple. Many bigger exchanges have not listed it due to the ongoing Ripple vs SEC lawsuit.

It seems that investors everywhere are searching for “XRP Price Prediction \$500.” To reach \$500, XRP’s market cap will be \$26 trillion. That is the size of the US GDP today and 30 times the market cap of Tesla today. Mathematically and in theory this is feasible. But in reality, this looks extremely impractical:

- The Global Remittance market size is about \$19 Billion and lets us for argument’s sake, it rises to \$200 Billion in say 20 years.
- There are too many players in the remittance business and it is likely that with increased competition from Ripple, many will offer the same services. So Ripple could be a market leader with the very little share.
- Assum Ripple ends with 25% of the market (highly unrealistic), and it would end with revenue of \$50B. Assuming margins of say 50% (unrealistic again), it would end with \$25B in earnings. This could translate to a price of about \$250.

Of course, it is just fantasy projection in reality. Businesses with these kinds of prices have to be highly monopolistic and given cross-country regulations on money transfers, such market shares are likely to be highly unsustainable.

In short, all these scenarios look unrealistic and far-fetched. Therefore, we would say XRP is unlikely to reach \$500. But we do believe that XRP can reach \$10. Of course, anything can happen in the crypto market, so this is by no means a guarantee.

[Download App for Android](#)

[Download App for iOS](#)

XRP Price Prediction \$100: Can XRP Reach \$100?

To reach \$100, XRP will have to rise 143x. That translates to a market cap of \$5 trillion (equal to 6x the current market cap of Tesla).

This looks incredibly unrealistic. The global remittance market can support a player with a \$5 trillion market cap assuming a favorable regulatory environment and competitors not coming up with similar projects.

Considering all these, we believe that \$100 dollars is a theoretical possibility but the odds of it becoming real are extremely low if not impossible, even XRP partially won in the Lawsuit.

Can XRP Reach \$10 in 2023?

Investors and enthusiasts are now wondering if XRP has the potential to reach the \$10 mark in 2023.

It's important to note that while the technical indicators suggest a bullish outlook, predicting the exact price movement of XRP, such as reaching \$10 in 2023, is challenging.

Here we'll try to explore the factors that may influence XRP's price movement and evaluate the likelihood of it reaching the \$10 milestone in the year ahead.

Whilst a favorable ruling to the SEC lawsuit would certainly be a huge positive catalyst for XRP, and would very likely see the coin become one of the best performers in the crypto space this year, above 14x gains to hit \$10 level this year might be an overly optimistic forecast.

That's because the bull market in the broader crypto markets appears to still be in its infancy.

Yes, macro conditions are set to improve this year, with the Fed's rate hiking cycle looking likely to already be over.

But cryptocurrencies like XRP may have to wait a few years and for further fiat currency debasement (via new rate-cutting cycles and liquidity injections) to post 10x - 20x gains from current levels.

What Makes Ripple (XRP) Unique?

- In essence, XRP is a coin for international payments, enabling borderless payments with near-zero fees and settlement in 2-5 seconds. In contrast, a cross-border transaction could cost roughly \$20 and take three to five days to settle using a traditional payment method.
- Currently, the network can process 1,500 transactions per second (TPS), making it much more scalable than Ethereum, which can process 10-12 TPS. Ripple has also previously stated it would like to match Visa's scalability of 65,000 TPS.
- XRP uses a consensus protocol with validators swiftly approving transactions. Validators could be Banks and Financial Institutions. Ripple is more centralized than Bitcoin and Ethereum.
- XRP ledger is used to create cryptocurrency wallets and XRP ledger can also be integrated to create a stablecoin.
- Ripple is a more privately-owned network as coins are released by Ripple directly unlike Bitcoin where coins have to be mined.
- Ripple with its open source and peer-to-peer decentralized platform can be used to transfer money in any form, whether it's dollars, yen, euros, or cryptocurrencies.

XRP Future Price Prediction: Factors Affecting the XRP Price

A Ripple Victory in the Lawsuit

Before the case was resolved, the SEC vs. Ripple lawsuit was the most important factor hindering the rise of XRP. The SEC's charges against Ripple resulted in a mass delisting of XRP across crypto exchange platforms and a sharp decline in the token's value, which used to be the third crypto asset by market cap after Bitcoin and Ethereum.

Now Ripple's win is interpreted as a validation of the crypto markets and has greatly boosted investors' confidence. The lawsuit has set precedent for other open cases that affect dozens of digital assets.

Otherwise, a ruling in favor of the SEC would probably bring further regulation to the sector as it would classify most tokens as securities.

Overall, the Ripple victory would potentially enable XRP to become the best-performing top-100 cryptocurrency this year, propelling it back up to \$1 before witnessing even bigger gains.

Other factors

- **Acceptance of Ripple As a Key Payment Protocol:** Ripple has been working to become recognized as a key mode of payment protocol that can enhance international money transfers. The company has further expanded its cross-border payments solution into France, Sweden and Africa. Many crypto experts are of the opinion that Ripple in the coming future could revolutionize the transaction process worldwide. If so happens, the price of XRP could skyrocket.
- **Government Regulations:** Government regulations around the world has been a key factor influencing the price of cryptos. If the regulations are tightened, the price dips and if there is some favorable decision, the price skyrockets. There government regulations will be one factor that could influence XRP price.
- **Drop in Inflation:** Inflation may fall below 6% in the next 3 months, will that pump XRP?

XRP Future Price Prediction: Conclusion

In short, XRP is a power-packed crypto ready to boom as it unshackles the chain of the US SEC lawsuit. The project arguably presents the most robust and clear-cut use case in the crypto industry.

Ripple has already partnered with Santander and over 200 other global financial institutions. This is evidence of the power of XRP's use case and gives it significant long-term potential.

Looking ahead, the crypto community once again rallying behind XRP could massively boost its price. Most traders and analysts are bullish on the XRP price prediction after lawsuit.

However, while XRP presents significant potential, investors must be aware that the crypto market is extremely volatile. The XRP price forecasts will be updated with the changing circumstances. So always do your own research and evaluate all necessary factors before making any investment.

FAQs

Is XRP a good investment for long term?

XRP's real-world utility as a less costly and more scalable payment makes it better in terms of intrinsic value versus other cryptos. With this in mind, it is wise to say that XRP is a good investment. Make sure to do your own research before investing in any coin.

Can XRP reach \$20?

To reach \$20, XRP would need to increase in price by 29x from its current price, not an entirely unrealistic target for an asset that has a market cap of \$36.8 billion. At \$20, XRP's market cap would be worth \$1 trillion. Though this is a very large valuation, it's certainly not impossible.

At the absolute peak, Bitcoin's market capitalization was \$1.27 trillion. Ethereum's peak market capitalization was around \$548 billion. So, as an established top 5 coin, it's not out of the realm of possibility for XRP to reach a \$1 trillion market cap.

Of course, to reach \$20, there are practical challenges and there has to be significant progress in XRP use cases to justify these levels. As ever, a lot will also depend on how the cryptocurrency market performs as a whole.

What will XRP be worth in 2023?

According to our XRP price prediction 2023, the maximum XRP price for 2023 is expected to be \$1.06 and the minimum price could be \$0.89.

How much will XRP be worth in 2025?

Our XRP price prediction 2025 suggests that XRP coin will be trading between \$1.50 and \$2.23 in 2025.

Where can I buy XRP?

Notable options for purchasing XRP include Binance, BTCC and KuCoin. Among these, [BTCC](#) is one of the best exchanges as it witnesses a large trading volume of XRP. Compared to Binance, BTCC has no regulatory concerns and is available in U.S., Canada and many other countries in Europe. Furthermore, [BTCC](#) is highly recommended due to its favourable attributes such as low fees, user-friendly interface, excellent customer support, and robust security measures with no reported hacks or security breaches to date.

Buying XRP on [BTCC](#) is simple. Once you've [created an account](#), you can choose to purchase XRP with [USD](#) and [USDT](#). The maximum leverages are 100x and 20x respectively, and the transaction will be safe, cheap, and fast with VERY easy steps. You can also choose to deposit [XRP](#) with a minimum single deposit of 450XRP.

[TRADE_PLUGIN]XRPUSDT,XRPUSDT[/TRADE_PLUGIN]

What are BTCC's specs?

Sometimes, users feel more comfortable working with an exchange if they know that the exchange has a footprint in the industry. With 12 years of stable and secure operating history, [BTCC](#) is one of

the [top cryptocurrency derivatives exchanges](#) in CoinMarketCap, which boasts a wide selection of 60+ cryptocurrencies and millions of registered users, offering services in 100+ countries.

[BTCC](#) charges 0.06% for both takers and makers, which are way below the industry average. According to the largest and most recent empirical study on crypto exchange trading fees, the average spot trading taker fee is 0.2294% and the maker fee is 0.1854%.

With high liquidity, low trading fees and fast transaction speed, BTCC allows users to open a trade immediately even when the crypto markets experience a sharp rise or plunge.

Apart from crypto trading, BTCC also supports tokenized futures service, allowing users to trade [stocks](#) and commodities futures ([Gold/Silver](#)) with USDT as the margin. The maximum leverage is up to 150x.

Trading on BTCC begins with [registration](#) and log in, which only takes 30 seconds. New customers can now sign up [here](#) to get a welcome bonus of 10 USDT, and complete the KYC verification to access all BTCC's features and [BTCC bonus](#). Once verified, you can start [trading XRP](#) now.
