EOS is a blockchain protocol developed by BM (Daniel Larimer). The main goal is to support business by enabling high-performance and high-security blockchain-based application to be build on the open source smart contract platform. EOS has raised 4 billion US dollars in one year and is currently the largest ICO project. In 2018, EOS was once regarded as Blockchain 3.0, and has set off a wave of TPS boom due to its vision of achieving one million TPS.

However, a series of problems emerged such as the high threshold to use EOS, and complicated technology. BM later developed other new projects, and project parties have been criticized for raising funds to buy treasury bonds. The current views toward the project is very polarized. EOS is currently quoted at a price of US\$3.02. In 2020, the price of EOS increases 9.60%.
