

The image is a promotional banner for BTCC. On the left, the BTCC logo is displayed above the text "Enjoy fees as low as 0.03%". Below this, there are three bullet points: "70+ crypto futures", "24/7 customer support", and "100,000 USDT for demo trading". To the right of these points are two more bullet points: "10-150x flexible leverage" and "Support credit card deposits". On the far right, there is a graphic of a smartphone displaying various financial charts and icons (Bitcoin, Yen, and a hexagon). Below the phone is a yellow "Register Now" button.

**BTCC**  
**Enjoy fees as low as 0.03%**

- 70+ crypto futures
- 24/7 customer support
- 100,000 USDT for demo trading
- 10-150x flexible leverage
- Support credit card deposits

Register Now

## About WEMIX (WEMIX)

Original:

<https://www.btcc.com/en-US/markets/WEMIX>

Wemix is a blockchain ecosystem aimed at providing blockchain-based games and [DApps](#) with the infrastructure to run without barriers like [high gas fees](#) or low transaction speeds. Wemix claims to have solved these problems by utilizing a mixture of private and public blockchain functions and connecting them with intermediary chains under a hybrid structure. Consequently, this system increases the scalability of on-chain gaming by providing private blockchains to accommodate the increase in the number of games.

Wemix also claims to lower technological entry barriers for traditional game developers since it provides middleware that takes over blockchain-related functions of games and minimizes modifications to existing games. Furthermore, its crowdfunding solutions lower financial barriers of entry for games by reducing development costs and simplifying the entry experience new users have to go through.

Its ultimate goal is to achieve mass adoption of blockchain gaming by targeting the traditional gaming sector, which currently stands at one billion gamers strong. Moreover, the developers hope to provide solutions catered to gamers themselves instead of the overly complicated decentralized applications available on the market now.

## What Makes Wemix Different?

The Wemix ecosystem consists of several elements in order to achieve its highly ambitious goal of bringing blockchain gaming to the masses. At its core, Wemix is a multi-chain project that is not too dissimilar from public blockchains like Avalanche (AVAX). It consists of service chains, a public chain, and a bridge chain connecting them.

Service chains are private blockchains run by Wemix that focus on the swift and smooth processing of mass transactions to avoid gas fees inherent in public blockchains. Wemix argues that providing a pleasant user experience should be prioritized over unnecessarily recording all in-game transactions on a public blockchain. In doing so, Wemix would be able to solve the scalability problem of games and DApps since it can adjust the number of service chains needed.

The public chain would take the role of the asset management chain in the Wemix ecosystem and process all monetary transactions. Assets generated on the service chains would eventually be bridged to the public chain, where trading occurs.

The bridge chain is an intermediary chain for easy transfer and comprehensive management of game

assets. Assets that exist on the service chains would be bridged to the public chain via the bridge chain. Once the desired transaction is completed, the assets could then migrate back to the respective service chain via the bridge chain. Wemix argues that this bridge chain is needed to reduce congestion in the other chains and achieve performance comparable to traditional client-server infrastructure that games have been using thus far.

Other important actors in the Wemix ecosystem are trade delegators, which is a type of middleware that processes trades on behalf of users and minimizes the burden faced by the user when having to interact with smart contracts. Wemix also has its own wallet to [exchange](#) between the WEMIX token and the game-specific tokens on the service chains. Finally, binders are another type of middleware that facilitates the integration of existing games with blockchain processes. Binders transfer the necessary data from existing game databases to blockchains and generate the transactions needed. In that sense, binders replace the role of the game server by connecting games to blockchains.

## Where Can You Buy Wemix (WEMIX)?

WEMIX is available on ZT, MEXC, Korbit, Gate.io and Bithumb.
